Past & Predictions (an introduction)

NWO Terminology Primer

Political Control Technology

Military-Police State in Action

Something Odd About McVeigh

Sorry - not enough room for the usual stuff

On The Past and Predictions

When we think of our founding fathers and the nation they founded by the Constitution and the Bill of Rights, we think of noble men, even nobler causes, and a valiant struggle by brilliant thinkers and the strong in heart. When we talk about World War II we think of similar thoughts, and perhaps of darker things that crawl from under rocks to wave black swastikas about in hopes of a New World Order called Fascism.

These two wartimes and the ideals which drove them to their happy conclusions were about one thing, the age-old bitter struggle between those that wield power for self gain and those whom they would enslave by that power: Oppression vs. Freedom. Evil vs. Good. But how vain the struggle and bitter the victory if in the end, by any subverted means, the victor adopts and applies the same evil oppressions against their own citizens? Could such a tragedy be true?

The answer for Europeans who bore the brunt of WWII devastations is starting to unfold.

Author and political commentator Rodney Atkinson is well known in Europe for his startling and uncanny abilities to predict political and socioeconomic futures. As result, he has often been retained as advisor to various government ministers. In his new book, *Europe's Full Circle: Corporate Elites and The New Fascism*, he compares the darkness of fascist Germany with identical realities found in today's Europe as it enters the final stages of unification within The New World Order (NWO).

While this article is *not* about Europe, (you can visit proparanoid.com to learn more), you need to know this about it: The net result of unification is an increase in oppression and a political control very like that attempted under Nazi fascism. The symptoms have not gone unnoticed by all Europeans, and there is a movement to counter with an appropriate concern over what is seen as an emerging military-police state.

The newly formed European Parliament is repeatedly challenging individual member governments, foreign allies (the United States chiefly), and the unification process itself over several key human rights issues. *This may be why the United States lost its seat on the United Nations Human Rights Commission this year.* One topic of challenge is quite germane to this special newsletter: Electronic and Non-Lethal Weapons (NLW) of political control. Only in Europe, it seems, is anyone standing up to these emerging technologies and asking the tough but morally correct questions about how they will be used, who will use them, to what purpose, and if they should be used at all. There is a similar crystal ball gazer here in the United States who is asking these same questions - and he wonders why no one in any level of government or the military is willing to provide answers. Political activist

and researcher, Dr. Nick Begich, probably knows political control technologies (PCT) as well as anyone, and has worked closely with the European Parliament as expert in science, politics, and education. His newest book, *Earth Rising: The Revolution Toward a Thousand Years of Peace* (my Web site for details) is a wealth of information on topic, much of this newsletter benefiting thereby. These questions are not new. One of the first of significant note to ask was author Aldus Huxley, who put his concerns into fictional construct in *Brave New World*, an futuristic nightmare not unlike George Orwell's *1984*. Based on 1958 technology, Huxley projected ahead a mere 40 years to describe exactly the kind of technology and social consequence which is the heart of this newsletter.

I hope to illustrate here that we are well ahead of Huxley-Orwell projections, a matter upon which I dwell heavily in the sequel to *The Professional Paranoid* now nearing completion. That work, tentatively entitled *MC Realities: Understanding, Detecting, and Defeating Mind Control and Electronic Political Control Technologies*, goes well beyond Begich with a selective focus on mind control (MC) tech.

In fact, about one-quarter of the 250 terms offered here have to do with MC technology (highlighted in pink.) This proves MC is already used against extremely large numbers of people everyone eagerly assumes to be 'crazy' - with more of us to be targeted at some future point. Welcome to the New World Order. *Sheep, do not be alarmed at the slaughter of your fellow sheep. As it is for their own good, so will it be for you.*

This topic is so important, it is FREE!

NWO Terminology Primer

Before we discussing the toys available to law enforcement, the military, intelligence agencies, techno-terrorists, corporate thugs, and secret societies, we need to review some basic definitions as used by the emerging Police State. In the process, we will gain insight into the thinking of trusted governmental sheppards who invent and apply these terms and the technology behind them against us, their flock.

Of course, some of these toys will be easily seen as legitimate choices for law enforcement, choices better than lethal gunfire. Some will argue over technical details, details which must remain murky due to the classified nature of many of these technologies. Others may be squeamish over my harsh language. But there is far too much going on here to simply grant government free license on the assumption that their intentions are good - wait until you see the RAATS technology (page 12), which illustrates clearly the reason I am so harsh as to use words like fascism, NWO, military-police state. The technology itself, if not the methodology of its testing, make clear the reason for the technology is in support of a NWO fascist military-police state.

Many of the definitions which follow were submitted in abbreviated form by me as expert witness to the State Legislature of Massachusetts in testimony to a committee considering a ban on electronic weapons this spring. Some material herein was obtained from an official listing of IEEE (Industrial Electrical Equipment Engineer) nomenclature found at <http://www.sew-lexicon.com/gloss_a.htm>, and is annotated as such by use of 'IEEE term'. This does not imply an exclusively engineering term since the listing

also includes (thankfully) almost all military and civilian weapons technology terms. In other instances, references or patents are cited as verification, the later used only when other experts have already connected the technology to the claimed weapon. Nineteen more MC patents which could have been used except for the space and redundancy follow at the end.

But understand that for reasons of national security, many more patents exist which are hidden from discovery. Patents which are available are often deliberately 'non descriptive' of weapons use in their titles, partially a natural result of the patent application process, and partly by design. It should also be noted that the underlined bold descriptions are actual names officially given the technology, while those not underlined are made up by the author for convenience or are popularized terms already used by the public. I'm not taking time to fully document some of the commentary-like things herein because there is simply not enough space or time. Regular newsletter subscribers have already seen me document much of the material, and more is documented in the books referenced in the introduction. I'll happily respond to specific inquiries for more information. Most definitions include a 'reality' check to help assess how relevant the term is to the here and now, and a 'spin' description as might used by government or media to explain the technology or term so you don't think too much about it - or I use it to deride the clear insanity. Organization is not alphabetic, but categoric and relational in nature. A few terms not quite on topic were so interesting that I included them anyway. Enjoy...

Police State Terminology

War: A military conflict aimed at forcing a desired degree of political control upon an enemy by force of arms.

Revolution in Military Affairs (RMA):

Changes in technology have impacted so drastically in military capabilities and strategies that the role of the military and warfare itself must be redefined forever. The reality - this term was introduced into military dialog in recent years to describe an observable process taking place over the last few decades, all of which is the root cause of many technologies discussed in this document.

The spin - strategic thinking must adjust to military modernization and downsizing.

Military Operations Other Than War

(MOOTW): Any military operation against a designated objective short of declared war, to include covert or overt insertion or extraction of forces or resources into or from denied territories; counter-terrorism and counter-drug surveillance, intercept, or search and destroy missions; operations in assistance to civilian authorities of a humanitarian or peace keeping nature. The reality - only alluded to in the expression 'peace keeping nature', is the polarization is taking place within the military's spending between hi-tech strategic defense and offense weapon systems (such as the ABM system and primary weapon system platforms such as aircraft and ships), and a different kind of hi-tech which is in support of MOOTW objectives dedicated to maintaining political control, such as those which follow. The spin - defining an expanded military role in peacekeeping operations.

Serial War: The old way of warfare - where military objectives are defined in the order of step-wise importance, typically dependent on obtaining control of territory and destruction of enemy assets: military units are positioned; the first objective is taken; units are repositioned and then the next objective taken; and in like manner the next, until a victor is apparent. It is a time-line oriented cause-and-effect exercise of advances and retreats based

on outcome (making the fewest mistakes.)

Parallel War: The new way of warfare - where multiple objectives can be assigned to various technology-based weapon systems without requirement for prior control of territory or destruction of enemy forces. The reality - in place now. The Gulf War and Bosnia conflict represent the first use of parallel warfare, which is why there was very little traditional military engagement. By means revealed in almost all of the other definitions found here, an enemy's infrastructure and resources, military or otherwise, can be attacked with or without use of traditional combat forces, since an enemy's military forces can become almost irrelevant to the matter. The spin - from the Gulf War: 'It was a well-coordinated and well planned military campaign.' True enough.

Invisible War: The ability to wage a completely covert war which inflicts real damage to the infrastructure, capabilities and political health of an enemy state without destruction of physical property or loss of lives, except by seemingly unrelated cause, and without any detection of the true means or source of destruction. The reality - in place now as detailed in this document. No spin - not for public consumption (NFPC henceforth.)

Ecco War: The ability to wage war using manipulation of ecological forces and resources of nature as a weapon system or target. This can mean engineering of biological agents and pathogens, the deliberate outright destruction of natural resources, or working to destroy or alter the balance of the various elements of nature and ecology. The reality - historical fact: the defoliation of Vietnam, Kuwaiti oil well heads set aflame, and much worse by technologies described herein, which can even cause storms and earthquakes. No spin unless to criticize an enemy's application thereof (see Ecco-

terrorism, next) - NFPC.

Ecco-terrorism: What our side calls it when another party wages ecco war, and more universally, actual terrorism based on like attack strategies by terrorist groups, something thankfully not yet known in history. The reality and the spin are inherent in the definition itself.

Biowarfare: An early form and distinctly unique variant of ecco war which existed before that term was coined. Use of biolog-

ical agents, pathogens and toxins to kill the enemy. Illegal under all existing conventions and treaties. The reality - in place now. The United States government has vowed not to be the first to use biological weapons, but we have taken all the steps necessary obtain and stockpile large quantities of the very deadliest biological weapons imaginable. The spin - 'Deterrence is the best defense.'

Bioethnic War: An ecco war against a specific race or species. The reality - developed but not yet deployed. State-of-the-art genetic engineering supports development of biological agents and pathogens designed to attack a specific race or species (such as a race of people, strain of wheat, or variety of fish) to cause any form of deformity, deficiency, infirmity, or even its extinction. No spin - NFPC, but it may explain why the U.S. is now willing to (and loudly so) give up chemical weapon stores for destruction.

Weather War: A type of ecco war based on weather-control technology. The reality - in place now, in Alaska, nearly ready to test: HAARP, the USAF High-frequency Active Auroral Research Program is set to conduct advanced (and highly classified) research in environmental control, energy, intelligence collection, communications, and select de-

fensive and offensive weapon applications based on applying VHF (very high radio frequency) to manipulate the earth's ionosphere, and in turn, to support enhanced ELF (extremely low radio frequency) signal projection. Capabilities reportedly include manipulation of weather in dramatic ways, such as diversion of the jet stream, creation of killer storm systems, floods, draughts, famines, and causing earthquakes of almost any magnitude. The spin - scientific study of the ionosphere for communications and possible weapon system applications.

Page 3 Directed Energy Warfare (DEW), aka Beam Wars: Any weapon technology based on radiated energy: lasers, radio energy, particle beams, sound, electromagnetic fields or beams, etc. The reality - the technologies are developed and await only proper weapon platform designs according to an article in the December 1999 issue of *Journal of Electronic Defense*. The spin - NFPC.

INFOwar: Information Warfare, which is the ability to assure the integrity, access, and use of your own digital informational resources while at the same time working to infiltrate, capture or destroy an enemy's like resources. This is about signal interception, hacking, virus', and Internet, network, hardware, software, staff and facility security. The reality - in place now. Special INFOwarrior units exist in all branches of the military and of the Department of Justice. They are unofficially and routinely used offensively against foreign nations and domestically and as a weapon of political control against citizens. I have personally been victim of such attacks. The spin - generally NFPC, except to promote the need for 'Web police' and increased Web security (which generally translates into undisclosed loss of privacy and rights to the citizen.)

Psychotronic War: Use of electronic and/or

chemical inducements to alter the emotional and mental state of the enemy. May include disinformation or propaganda programs. We are talking about mind control. The reality - in place now, as seen in many definitions which follow. Silent Sound technology was used in the Gulf War to insure massive surrenders by the Iraqi, for instance, and in Bosnia to sway elections (see Command Solo). The spin according to CIA - 'mind control does not exist, does not work.'

People's War: A term invented to apply to an expected uprising of the people (described as 'Constitutionalists' and 'patriots') for some unspecified cause (alluded to 'commercial' and 'spiritual' causes, as well as to seemingly expected gun seizure) - an eventuality for which military planners and scientists are apparently quite preoccupied. The reality - term regularly appears in *Parmeters*, the journal of the Army War College. Many people may remember the downplayed U.S. Marines "*Shoot American's Questionnaire*" discussed herein. See MOUT and other technology definitions for more examples. No spin - NFPC, so far.

New States of America: The name found on a document entitled *The Constitution of The New States of America*, created at a cost of \$25M by a globalist/intelligence community think tank. The reality - taken from a copy machine from the *Center for Democratic Studies* by former US Naval Intelligence officer William Cooper, author of *Behold a Pale Horse*. The spin - NFPC.

Red List, Blue List, Green List: A so-called 'left wing conspiracy' tenant which holds that there is are secret lists of names divided into three categories maintained by elements of the military and intelligence community. Large numbers of Americans are on one list or the other. Red for militia members, activists and political dissidents

and criminally undesirable persons targeted for death; Blue a list of relatives of the Red List, untrustworthy officials, and others targeted for full immobilization (detention camps.). Green for military, law enforcement, government employees and other persons considered fascist loyal or who will give allegiance to the new authority. Names not on any list are 'good citizens at large.'

Anti-Communications Warfare: Military action to reduce or destroy the effectiveness of enemy communications. The reality - IEEE Term. Every major telecommunications sector and region in the United States has, over the last two decades, suffered at least one unexplained total loss of communications which may represent testing of this technology as it might be used in martial law or other military takeover. Entire cities, states, and regions have 'blacked out' and required only a complete shutdown, reset/restart of systems to come back on line (can take many hours to troubleshoot and eventually initiate such action.) The spin - 'An effective defense tactic against foreign enemies'

War on Drugs: An organized effort to stop the flow and distribution of drugs by drug cartels. The reality - founded by select CIA elements, the war deliberately ignores the illegal drug trade organized by CIA itself. By means of infiltration of key law enforcement positions at various levels (the head of internal affairs, for instance, because they can then find and 'convert' bad cops into the cause - and it happens by chance that more prominent chiefs of police are former IA heads than not) and by carefully coordinated MJTF (combined DEA, state, county, and local law enforcement task forces) strikes, the flow of drugs is not restricted in any way except in terms of who is allowed to sell it. The spin - we are losing the war, we need more money and cops on the streets - and

National Guard resources, too (see political control events.)

Disinformation aka Propaganda: The art of disseminating lies, half-truths, and political rhetoric, and applying assorted tactics to mislead, confuse, or misdirect a specific opponent or the public at large, or to enhance or destroy the popularity of a given political or informational concept. The reality - see 25 *Rules of Disinformation* and *Traits of A Disinformationalist* (by this author) found at the proparanoid.com Web site, as used in both political science and journalism classes at various colleges. The spin strategy - if you tell a lie often enough, people will believe it. (The 1st tenant of Hitler's Propaganda Minister, Dr. Joseph Goebbels.)

Full Spectrum Information Operations: A U.S. Army strategy merges key disciplines and methods: Deception; Psychological Operations (PSYOPS); Operations Security (OPSEC); Electronic Warfare (EW); Physical Strikes (combat); Civil Affairs; Counterdeception; Counterpropaganda; Counterintelligence; Computer Network Defense and

Attack (INFOWAR); Public Affairs. The reality - IEEE term, in place now. This 'military' concept can be easily adapted against a nation's own citizens, and already has. See Hurricane Andrew and similar Political Control events at end of this document. The spin - NFPC.

The Fourth Estate: A term to imply media is a biased tool of government. The reality - until recently, ALL (now, all but one) major broadcast networks were owned by military contractors, and virtually all news is controlled by a handful of corporate giants, several by CIA operated or infiltrated 'fronts.' The

spin is ALL you get - I call it mind control.

CNN Effect: A term which denotes the 'leading' of public opinion due to quick publicity around the world of a given military action, especially by U.S. forces. The reality - part of strategic disinformation planing and damage control (see prior and next term.) The spin - generally NFPC, but some commentators have used the term.

Wag The Dog: A term describing the use of disinformation and manipulation of media to foment popular support and political results, or to effect damage control of a politically dangerous situation. The reality - see the film 'Wag The Dog' with Dustin Hoffman and Robert DeNiro for an example of how it can be done - has indeed been done. Robert DeNiro's character in the real world is CIA's Mark Richards, who masterminded media damage control on Flight 800, Waco, Iran Contra, CIA Drug Ties, and more - and who told us the lies that sent us to war with Iraq (Iraqis taking babies from incubators and bayoneting them.) An old ploy. In 1917 we went from a pacifist doctrine to war with Germany over lies about Germans raping and cutting off breasts of Belgium women. The spin is STILL all we ever get...

Psychological Operations or (PSYOPS): Planned operations to convey selected information and indicators to designated audiences to influence their emotions, motives, objective reasoning, and ultimately the behavior of foreign governments, organizations, groups, and individuals. The reality - military tactic used against civilians at Waco. See end of report for more examples. The spin - 'Do the Noriega Rock.'

Code Word and Double Speak: The use of words with two meanings, one for public consumption of no apparent negative context, and one for internal consumption or private communication of covert meaning.

The reality - long a trick of the intelligence community, it is also used by government and corporate insiders and power brokers to openly discuss matters which the public would find objectionable, such as PCT.

New World Order (NWO): Generally used to denote an evolving process of global political alignments and global free-market thinking. The reality - a code word for world rule by a corporate state (fascist in nature) first known to be used in the late 1800s by Satanic groups such as the Illuminati, The Hermetic Order of the Golden Dawn, and first publicly used by Cecile Rhodes. His Rhodes scholarship program helps place persons who believe in NWO tenants to achieve positions of power in the world. The round table groups such as The Council on Foreign Relations (CFR), the Trilateral Commission, and Bilderbergers, are NWO groups which some call the modern-day Illuminati. All such groups can be traced to the Freemasons, itself a satanic cult according to their own *Morals and Dogmas*. The first President to use the word was former CIA director George Bush, who was member of several round table groups. The spin - 'The world is getting smaller and more dangerous, and national sovereignty is less important than world peace and prosperity.'

United Nations Disarmament Commission: UN body dedicated to reductions in nuclear weapon proliferation and stockpiles. The reality - the NDC charter specifically includes a mandate to disarm American citizens of personal firearms. This program starts by creating partnerships between State's National Guard and foreign military counterparts within the former Soviet Bloc and other nations, and is tied to the MOUT program involving US military. The distractionary spin - 'No nuke is a good nuke.' (Unless Smith & Wesson are ground zero.)

Total Surveillance Society: A term to describe the ability to track individuals, all forms of communications, financial transactions, and observe public behavior on demand. The reality - largely in place now, with the only weakness in general video surveillance of public places. According to *Statewatch*, 20 nations now participate in something called the EU-FBI Global Telecommunication Surveillance System. Of course, the U.S. has Project ECHELON, described herein. The spin (when people object to a single discovered aspect, such as roving wire taps) - 'If you have nothing to hide, what does it matter.'

Digital Persona: Digital information 'in the system' about you as a person which, cumulatively, in a very practical way to those who use such information, is a more accurate and useful picture of you than any actual knowledge of you as a human. The reality - in place now, anybody who has the expertise can access, alter, and steal your digital persona. The spin (when you object to providing information) - 'It is a small risk to take for the added personal freedom and convenience (the transaction contemplated.)'

Data-veillance: The complete access to all communications and data resources in use by the TI or group, preferably conducted in real time. The reality - an INFOwar offspring technology in place now. Your email and all other communications, can be watched and recorded on the fly. Your Web visitations can be tracked, and by use of virus and other software tools, your computer can be made to divulge not only secrets directly off of your hard drive, but also, to report regularly everything you typed and the files you opened or created and saved. The spin - 'We need the tools to fight terrorism, child pornography, and Internet crimes.' (This is one reason I own a Macintosh instead of a PC -

they are not vulnerable to most such attacks.)

National Security: A veil of secrecy used to protect sensitive information or matters which are deemed harmful to the interests of the nation if revealed. The reality - the banner cry oft used in legislation to grant broader powers to the intelligence agencies, military, and DOJ - an open ended excuse from behind which any manner of crime or wrongdoing can be committed and then hidden, and by which draconian erosions of the Constitutional rights of citizens are undertaken. Once secrecy is invoked, not even Congress seems able to get at the truth or perceive the actual damage to freedom. The spin - 'We need to balance personal freedoms against the need for greater national security if we are to counteract (a particular perceived and promoted excuse threat.)'

MOU: Military Operations in Urban Terrain. Replicas of whole urban neighborhoods and business districts, underground sewers, telecommunications and power systems, traffic controls, etc. The reality - A \$12M (29 buildings, including several multistory buildings, a church, hospital, homes, and elaborate system of tunnels and pop-up talking targets) MOU complex was built for the United Nations North American Training Center at Ft. Polk, Louisiana - one of two of the Army's Joint Readiness Training Centers where military and law enforcement train for operations which would only be legal in a martial law situation. Other MOUs exist at Fort Drum, N.Y.; Fort McClellan, Al.; Fort Indiantown Gap, Pa., and the FBI's Quantico, Va., which has been under U.S. Marine occupation. All such sites have homes and storefronts signed with names which can in no way be mistaken for

anything but American cities - reportedly to include McDonalds in some cases. Training focus is military and joint military-police in search and seizure operations conducted before grandstands of trainee observers and officials/top brass. Includes door-to-door and barricaded check point vehicle searches (citizens removed from vehicle at gun point, forced face down onto the ground, ID checked, vehicle unloaded, dismantled, and searched.) Contrast this to military's traditional search and destroy role and one begins to ask who decided this training is necessary, and by what authority? Who is to be searched, what is to be seized, and why? The spin does *not* address the questions - 'Counterterrorism tactics training.' (Who are the terrorists in this picture?)

Suicide Cult: Term applied by media to describe any religious group which threatens or commits mass suicide, typically in conjunction with 'radical political viewpoints', 'weapons stockpiling' and an extreme fear or 'distrust of government.' The reality - almost all experts on MC agree that all such cults have thus far had visible ties to CIA MC projects at inception, during growth, and especially at their destruction. Tim Jones and David Koresh were influenced and funded by the same CIA forces, and both were destroyed by government actions taken at the advice of CIA's Cult Awareness Network, itself formed by CIA MC scientists. The spin (strategy) - religion is equated with radical politics, gun violence, and mental illness.

Satanic Cults: Various groups involved in worship of Satan. The reality - CIA MC projects involved heavy satanic worship and other occult practices (voodoo, etc.) Project Monarch was a CIA programmable agent project based almost exclusively on ritual satanic sexual abuse. From these projects can be found direct ties to peculiar American

tragedies such as the Manson murders - aka 'helter-skelter.' The spin - apologetic denial of the existence thereof: 'Satanism is a harmless oddity like many other religions and no charges of ritual murders or ritual sexual abuse have ever been proven in court.'

National Guard: Soldiers under arms belonging to state-commanded militias under the collective command of the US Army as authorized under the Constitution of the United States, prohibited from participating in law enforcement actions under the terms of the Posse Comitatus Act. The reality - See the Liebe Street Raid and other political control events at the end of this report. The spin - 'Be the best you can be...'

National Police: What should probably be an illegal police body under the Posse Comitatus Act, formed by executive order with the official role to protect and facilitate the Federal Court system with respect to processing detained prisoners within the trial process. The reality - some states (New Hampshire) are contracting state police responsibilities out to the National Police in direct violation of Posse Comitatus. When President Clinton promised 100,000 new police, the National Police force grew dramatically. The spin - 'We need to get tough on crime.' (Let's start at the White House, please!)

Regional Police: A move to do away with State Police and replace them with Regional Police who cover multiple states. The reality - in place now in several New England States. Believed to actually be contracted services provided by National Police (identical cars and uniforms) in violation of/attempt to get around Posse Comitatus. Regional Troopers have quickly achieved a reputation for excessive violence and abuse of power, and local citizens are frustrated in any attempt to find or access responsible

local authority. Constitution of New States of America and multiple documents purported to come from New World Order/Department of Defense planing materials call for establishing 10 regions within United States and doing away with current State entities (both resources use identical maps.) The spin - ;More economical and able to chase violators across state lines.'

Teamster Police: The unionization of State Police and other police agencies by the Teamsters. The reality - attempts or the successful unionization of State Police by the Teamsters has been undertaken in virtually every U.S. State, even those which currently have their own union already in place. Once 'unionized' by the Teamsters, according to at least one TV investigative report focusing on the New Jersey/New York area, truck hijacking waxes epidemic and crooked cops, crooked truck drivers, and crooked union bosses split the profits.

Web Police: A conceptual police agency able to track all Web activity of targeted individuals and monitor and defend against illegal Web activity. The reality - armies of INFO-warriors are assigned by multiple agencies including DOJ to this task, but not yet formerly organized or empowered with any official capacity or charter. The spin - 'Something must be done to stop child pornography and other Internet crime.'

Movement Police: A conceptual police agency able to track any given target individual's whereabouts and activities on demand. The reality - all of the technology needed to form such an agency is in place at this time (see remaining definitions) and some people believe the super secret FINCEN (Financial Crime Enforcement Network) is actually a cover group name for what is actually the Fema Intelligence CENter, which uses supercomputers designed specifically for

such tracking purposes, including financial transactions. The spin - NFPC.

Thought Police: Originally political science fiction by the likes of Huxley and Orwell, advanced mind-reading technology to monitor children for 'improper thoughts' is proposed, along with a new Federal agency to 'protect' citizens and place them into 'treatment' prior to developing social 'problems'. The reality - this future concept is actually proposed by a FBI think tank (reasoning they can better determine what we should be thinking) as reported in *Security Management*, July 1999 - *Law Enforcement and Technology News Summary*. Future spin - 'Sheep, crime is at an all time low, though the number of lambs undergoing therapy is rather high at the moment...'

Community Policing: A concept created the think tank sector at FBI's Quantico, law enforcement officers are brought into a community from without, so that they have nothing in common with the citizens outside of work context. The reality - in place in almost every major U.S. city. Code word for mid-way positioning of police between the original close-knit community involvement to police-state occupation of community. Instead of allowing police to live in the same community they work in, they are effectively 'export-imports.' The typical cop is thus exposed only the bad element of the area and is less likely to establish friends, resulting in harsher judgmental views and treatment of the citizens - almost always higher per capita police shootings and reports of police brutality. The spin - 'We serve and protect by working closely with local citizens.'

Corrections Initiative: Build more jails. The reality - the United States houses more prisoners per capita than any free nation on the earth, more than many dictatorships and

communist states. FBI statistics over the last decade show a decided trend to greater reductions in almost every crime statistic. Most of the prison populations are decidedly minority and underclass in nature, unable to afford the best defense. The spin - 'Tougher sentencing and mandatory life for third-time offenders means more beds are needed.'

Endless Punishment: The reevaluation by psychiatrists of violent offenders when their criminal sentence is finished in order to determine if there is a likelihood of repeat

offense, if released. In such a case, their sentence is extended. The reality - in place today in many states for certain sex crimes and violent offenders. The problem is that once this door is opened, it can be applied to increasing categories of offenders until no one can get out of prison they don't want to let out. The spin - 'We are getting tough on crime and care about the community.'

Gun Violence: Banner term applied by media to describe high-profile shooting incidents involving famous persons, highly visible criminal activities, or multiple victims of a single shooter. The reality - in many of the famous person incidents and virtually all of the multiple victim cases, virtually all shooters have been under psychiatric care involving the use of Serotonin Reuptake Inhibitors such as Prozac, a drug developed under contract to CIA for MC experiments. The spin - 'Stronger gun control legislation is needed. By now, this should sound familiar.'

Beamers and Wavies: Informal derogatory term applied by media, law enforcement, and the medical community to describe anyone claiming to be a victim of MC technologies

or electronic weapons as defined herein. The reality - the product of a deliberate disinformation. Anyone who does not believe in MC has never looked at the tech or patents revealed here. The spin strategy - put them into the same cubby hole as UFO abductees and 'other lunatics', being sure to include off-hand mentioning of 'aluminum foil hats.'

Beeps and Squeaks: A tongue-in-cheek reference to electronic warfare. The reality - IEEE term (slang), in place now. Used principally by the users of the technology and originally in military context only, it is now also employed by operators and managers of electronic weapon harassments on citizens. The spin - NFPC.

UFO Abductees: People who claim to have been abducted by aliens, typically involving ritual sexual abuse and other traumatic experiments. The reality - no one can prove UFO's do not not abduct and conduct experiments. But I can safely say that several military MC projects have been tied to faked UFO abductions, ritual sexual abuse, and other traumatic MC experiments. It provides a perfect cover story to account for repressed memories which later come to surface. No law enforcement agency will investigate an UFO abduction, but must investigate a sexual abuse case. The spin strategy - 'Ignore these people, they are crazy.' This is perhaps why media has also stopped covering UFO sightings, because to do so might give credibility to abductees.

UFO Flap: A derogatory term applied to a large number of localized (geographic and/or time frame) UFO sightings or abduction reports. The reality - a term intended to deride claimants, cause media to ignore such incidents, and to insure that law enforcement does not investigate such claims. The spin - "One person sees something and everyone wants to jump in. Psychologists call it

'mass hysteria' - the suggestibility factor."

Zap Flap: A derogatory term applied to a large number of localized (geographic and/or time frame) electronic weapon or MC attack reports. The reality and spin are the same as for UFO Flaps. It makes a joke out of a serious abuse of human rights.

Targeted Individual (TI): Any person targeted by an agency, group, or individual employing electronic weapons, MC technology, assault or harassments to achieve political control, conduct experiments, or for twisted personal gratification. The reality - in use now. The spin - NFPC.

Operator or Handler, aka Perpetrator or simply **Perp:** Anyone who employs electronic weapons or MC technologies and other harassments against a TI. The reality - in place now. The later two terms are used by those under attack, because Operators and Handlers are guilty of gross crimes against humanity. The spin - NFPC

Victim: In proper use within the context of MC topics, any TI who does not yet know they are under attack, but perceives only 'strange problems.' The reality - TIs are victimized twice: Once by the perps, and again by 'the system' (law enforcement, courts, medical professionals, and media) who instead of offering help when requested, blame the victim and label them as in need of psychiatric help. No spin needed since they don't know they are a victim.

Survivor: Any victim who has discovered they are a TI, and who attempts to fight back. The reality - it is not an impossible fight but must surely seem so, for they can generally get no help, cannot identify the means or source of the attack, and cannot well defend against it. They truly exemplify the best traits of human spirit and courage. The spin - 'Just another wavie on the loose.'

Political Control Technologies

Political Control Technology: 'The product of the application of science and technology to the neutralizing the state's internal enemies. It is mainly directed at civilian populations, and is aimed as much at their hearts and minds as bodies... and ranges from means of monitoring internal dissent to devices for controlling demonstrations; from new techniques of interrogation to methods of prisoner control.' The reality - this quoted definition was first used in Europe twenty years ago by the British Society for Social Responsibilities of Scientists, a kind of watchdog group. It was coined, in part, to describe American NSA Echelon technology brought into Europe for the benefit of the British and US government, but not used officially until the European Parliament began studying the problem of NLW and other technologies described herein, again, chiefly American inventions. I define PCT as any weapon from among three categories, which includes devices with overlapping functions in: 1) Surveillance and Tracking technology relying on both overt and covert means, which may include invasive body implants; 2) Harassment and Deterrence technology designed to impair vision, hearing, mobility, physical strength, bodily functions, or mental clarity, or to cause physical discomfort, pain (or even injury or death at higher operating levels); 3) Mind Control technology capable of altering perception, mood, emotion, willpower, sense of self, or of actually detecting or imparting mental images, sounds, or thoughts. The spin - 'New humane methods augment community policing policies. A more dangerous world calls for reevaluation of basic investigative and law enforcement policies and tactics. Some basic rights and freedoms long taken for granted may need to be

revised to facilitate the insured safety of society as a whole.’ (‘Society’ being the military-industrial-intelligence-media cartel)
Non-lethal Weapons (NLW): Any weapon defined as having minimal lethality. The reality - if that was the true definition, the problem would remain that virtually all NLW can kill, typically because the user applies the weapon more aggressively in the false belief it cannot kill, and also because most such weapons have excessive impact on persons with impaired health. But the true definition is this: A code-word phrase with two meanings: 1) The meaning assumed by general public to refer to less-than-lethal weapons such as rubber bullets; 2) The meaning privately conveyed by government, the military industrial complex, and intelligence community to further include Political Control Technologies...

Chemical-based NLW: A NLW weapon based on chemical compounds. Pepper spray and caustics, dye markers, and sticky foam are examples. The reality - Pepper spray, the best known of the examples, is outlawed in Europe as a neurotoxin too dangerous for use. But in the United States, a \$57,000

bribe to an FBI official got an approval. Over 100 fatalities are linked to the product. Anyone using the spray is liable for prosecution of assault, assault with a deadly weapon where death results. The spin - ‘Better living through chemistry.’

Electronic NLW: A NLW based on electronics, electromagnetic fields, and radiated or directed energy such as radio frequencies (RF), radar, microwave, x-rays, audible and ultrasonic sound, light, etc. The reality - the fastest growing and most dangerous class of

weapons among NL technology, chiefly because scientists are just beginning to understand the long-term and short-term effects of this technology on the environment and upon living tissues and organs. Many scientists claim that these same types of energy can cause severe health hazards at a small percentile of the levels actually used in these weapons, which means that collateral damage to innocent bystanders can be as significant a risk as if a casually aimed shotgun had been used. The spin - ‘There are no credible scientific findings that prove these energies harmful.’ (True, of course, because no one dares test on humans, and because such tests take many years to complete, and because the weapons are not made available for testing.)

Eugenics: A concept of population control which is based as much on death control as birth control. Euthanasia is the best known example of the death control concept. The reality - eugenics as a field of study comes to us from Nazi Germany, modern Eugenics courtesy of CIA founded (William Casey, former head of CIA) Manhattan Institute think tank. Many people who have studied Eugenics fear it to be the ultimate fountain-head of select wars and possible bioethnic attacks (hoof and mouth, etc.) The spin - “We need to take a serious ‘broad picture’ look at world population and be open to creative and humane solutions.”

Bio-implants: Small to extremely small capsules (some smaller than a grain of rice) which contain electronics but which are encased in a material which the TI’s body will not reject. The reality - in use for some time, new models draw power from the body itself and need not be replaced or removed, ever. An assortment of special functions are available from tracking to eavesdropping to physiological responses on command. Bio-

implants, if small enough, can be inserted into the body without the victim’s specific knowledge (they just think someone accidentally jabbed them with an umbrella, or some such similar event.) The spin strategy - ‘Make it easier to find and identify your dogs, kids, military personnel, etc., if they turn up missing.’ (Uh... who in their right mind believes that anyone looking for a lost dog or kid will have the needed equipment to take advantage?)

Digital Angel: A bio-implant intended to provide identify the user (or TI), report medical information, provide tracking information through GPS (global positioning satellite) systems or through the Internet by (unspecified) wireless telecommunications. The reality - in place according to *World Net Daily* in Oct. 2000 - a firm named Applied Digital Solutions showed a working prototype. Spin - ‘Saves lives, allows secure Internet transactions.’

Bio-electric Attack: The additional use of electronic weapon technology to make TIs susceptible to special biological agents which would otherwise have no negative effect. Targeted individuals could be ‘tagged’ with otherwise ‘harmless’ biological agents by any number of means, such as paint balls, sprays, etc., subsequently activated as biological attack by selective electronic targeting. The reality - a great means of dealing with protesters and political dissidents, this is one of several items from a paper by Lt. Col. David Dean, U.S.A.F. published by the Air University Press in 1986 (*Low-Intensity Conflict and Modern Technology*). The spin, in light of bans on biological warfare - ‘Their deaths remain a mystery because the electronic weapons were non-lethal, and the toxicology report clearly indicates there were no dangerous biological or chemical materials in the area at the time.’

Anti-Material Chemicals and Biologicals:

A NLW involving materials to block access to bridges, roads, sea lanes and other means of passage; and to contaminate fuel and render high-explosives ineffective. The reality - IIEEE term, in place now. In a martial law situation or military takeover, the military can contaminate the entire fuel supply of the nation, and make egress from cities both unthinkable and impossible. The spin - NFPC (it would seem to contravene international agreements)

Neural-chemical Enhancers: A non-lethal control technology based on engineered drugs which either directly change the behavior of the TI or their susceptibility and their reaction to select neuro-impacting products such as cocaine and other drugs. The reality - LSD was first introduced into the US by Eli Lilly Corp. under CIA contract, CIA then introducing it into college campus' as part of the testing process. Dr. Timothy Leary was, in fact, a CIA vehicle for same. The spin at the time - 'Tune in, turn on, and drop out.'

Selective Serotonin Reuptake Inhibitors:

A whole drug family of neural-chemical enhancers widely promoted as mental health tools for treating a range of conditions from depression to schizophrenia. The reality - also developed under contract to CIA for MC research, these drugs increase the TI's susceptibility to MC methodology and reduce their likelihood to complain or resist. The spin from a TV ad - 'Get more out of life. Ask your doctor about Prozac, today.'

DNA Tracking: Use of human DNA in criminal investigations, a concept intended to be extended through a controversial Federal collection and cataloging of DNA samples much like fingerprints. The reality - The United States, Canada, Australia and Great Britain have all started national DNA databases. Computerized matching is as

simple as used for fingerprints, and there are devices in testing capable of collecting hundreds of DNA samples by simply sampling the air or dust of a targeted room, making DNA tracking in the field a real possibility. Officially, databases can include only criminal samples, but analysts believe it is only a matter of time before everyone is cataloged. CIA is thought to have established a nation-wide network of DNA collections through firms contracting to hospitals to do blood work ups, so everyone born in or admitted to a hospital or medical facility where blood samples were taken since 1993 is likely already in at least one covertly run database. The future spin - 'Less evasive because a mere hair sample or skin rub is needed. Only criminals need fear it.'

Metal Embrittlement: The use of agents which severely weaken metals by chemically changing molecular structure. They are clear, leave imperceptible residue, can attack almost any metal, and can be applied with a felt tip pen. The reality - IIEEE term, in place now. The spin - NFPC, and probably only used by CIA and special warfare units, covert action elements of FBI, DEA, etc.

Sticky Foam: Pressurized canisters much like fire extinguishers expel a fast drying adhesive foam which quickly hardens to trap suspects, seal doors, slow or stop machinery or vehicles, render sharp objects safe, etc. Versions call for electrifying the foam as well. The reality - prototypes have been demonstrated, better versions now under development according to *Law Enforcement Technology*, May 1999. Victims suffocate if it covers their face, of course, and if convulsing due to electrification, they fall into the puddle of foam at their feet. The spin - 'A harmless Spiderman solution to crowd control and tactical response needs.'

Bolo: An modern NLW version of the Argentinean cowboy's functional equivalent to the American cowboy's lariat, consisting of a shotgun round holding three rubber projectiles connected by 5.5 foot high-strength cords. The bolo is designed for use against fleeing TIs, where a target hit by any of the balls will cause the other balls to wrap the cord around the legs of the individual. The reality - IIEEE term, in place now. The spin - 'All wrapped up and no place to go.'

Sting Net: A NLW similar to Bolo which launches two projectiles connected by a tether which, upon contact, immobilizes the targeted individual(s). The reality - IIEEE term, a real product deployed to unknown agencies. The spin - 'Let's net some fish.'

Flex-Cuffs: Lightweight plastic disposable restraints (hand-cuffs) to immobilize individuals. Can be carried in large quantities by soldiers. The reality - IIEEE term, in place now in many police departments, but notice the official description talks about large quantities carried by soldiers. You might ask why? The spin - 'Economical detention of large numbers of persons.'

Pepper Gun: A shotgun like weapon which fires a plasticized ball of compacted pepper spray material which 'explodes' into a fine powder on impact (see next term.) The reality - banned in Europe as too dangerous to use, and intended to be fired NOT at people but at walls and other hard object near groups of targeted individuals, the Portland Police Department eagerly tested the weapon by firing point blank two rounds at a Hispanic man who was standing by his truck lighting a cigarette - see the Liebe St. Raid, as described further at the end of this section. The spin - local police refused to acknowledge use of the weapon despite witnesses.

Frangible Projectile: A NLW projectile which disintegrates to a powder on impact, intended to dispense pepper spray or CS tear gas materials. The reality - IEEE term, in place now - see above item. The spin in use - 'Dust 'em boys!'

Skat Shell: A NLW shell capable of dispersing continuous tear smoke for large crowd control. It releases multiple individual burning projectiles from a single cartridge. Each projectile burns for 30 seconds. Its effective range is more than 130 meters. The reality - IEEE term, in place now - deployed to unnamed agencies but not seen in use anywhere, yet. The spin - NFPC at this time.

Dry Ice Bomb: A NLW consisting of a dry-ice bomb that incapacitates subjects by overwhelming them with CO2 at concentrations above 15% by volume. The reality - IEEE term, in place now. NOTE: Because CO2 can be lethal, oxygen must be available to treat the affected individuals as soon as possible. The spin in internal discussions about strategic value in the event of fatalities - 'Evaporating entirely, there is no evidence of its use, and an autopsy shows only suffocation by unknown means.'

Bean Bag Baton: A NLW consisting of an aluminum baton which utilizes an air cartridge to fire a bean bag filled with lead shot at 300 ft/sec. The reality - IEEE term, in place now. The spin - 'Swing 'em gently to intimidate, aim and fire 'em to incapacitate, and swing 'em hard to lacerate.'

Variable Velocity Rifle System(VVRS): A rifle designed to deliver a variety of munitions which vents propellant gas to vary projectile velocity for either lethal or non-lethal effects. The reality - IEEE term, in place now. See next section. The spin - NFPC, since it wouldn't do for us to know that NLW can be deliberately used to kill with the flip of a dial.

Less-Than-Lethal (LTL) Munitions aka Modular Crowd Control munitions (MCCM) aka Blunt Impact Munitions: NLW crowd control munitions consisting of rubber balls, rubber pellets, finned rubber projectiles, bean bags, shot bags, etc. which are fired at low velocity, with a range of 10-50 meters. The reality - IEEE term, in place now. See following terms for spin.

Crowd Dispersal Rounds: LTL munitions which can target multiple TIs with a single shot. The reality - IEEE term, in place now. The spin - 'Fire one, down many.'

Rubber Bullets: The earliest, best known form of LTL munitions. The reality - since its inception some twenty years ago, rubber bullets have killed large numbers of persons (numbers vary according to source, most agencies unwilling to corroborate) and put hundreds more into hospitals with severe injuries. New versions operate in machine-gun fashion, such weapons being used on demonstrators at point-blank range by Seattle Police at the WTO protests in 2000. The spin - 'Humane firepower.'

Punch Gun: A NLW gun which fires a 322-grain rubber ball at about 110 meters per second. Feels like getting punched. The reality - IEEE term, in place now, but not widely used, yet. See next. The spin - 'extended reach for the long arm of the law.'

Paint Balls: A kind of rubber bullet which is actually a small rubber balloon filled with dye or chemical markers which burst on impact. Any biological or chemical weapon could easily be substituted for or mixed with paint without anyone being the wiser. The reality - paint ball is extremely dangerous, intended for use where participants wear heavy body padding, helmets, and goggles. Seattle Police used an automatic-fire versions pneumatic paint-ball technology during the World Trade Organization 'riots' by firing

point blank into the faces of persons seated in linked arms on the ground. The spin - 'You can run, but you can't hide, because you almost glow in the dark' (and might actually if the right marking agent is used.)
Vehicle Active Defense System (VADS): A NLW system which can be mounted to vehicles to provide flash, bang, and smoke grenades. The reality - IEEE term, in place now, deployed to unknown agencies. The spin - 'We can make any vehicle an urban assault/riot-control unit.'

Rubber Ball Launching System (RBLS): A vehicle-mounted NLW which fires up to 1,400 rubber-matrix balls with steel particles. The system consists of two launch units, 10 cartridges to a unit, 70 balls per cartridge. The reality - IEEE term, known to be installed on special riot control vehicles - but no one has yet seen these vehicles used anywhere. The spin - NFPC, yet.

Stingbag: A NLW munition consisting of a cloth bag containing 1 oz. of lead shot. The reality - IEEE term, in place now and delivered to unnamed agencies. The spin - 'Get the lead out.'

Stingshot: A NLW gun round loaded with rubber projectiles (either 18 pellets, 3 balls, or a rubber rocket). The reality - IEEE term, in place now and known to be delivered to unknown agencies. The spin - 'Tactically flexible, PR acceptable.'

Disorientation Device and/or Munitions, aka Confusion Weapon: Any NLW which modifies the behavior pattern of the TI through disorientation. The reality - IEEE term, in place now. Several following terms give examples and spin.

Aerial Diversionsary Device: A confusion weapon featuring multi-shot distractions of individuals or crowds. Includes warning shot flash-bang projectile to be fired over the

heads of a violent or potentially violent crowd to allow other troop formations to maneuver to more advantageous positions. The reality - IEEE term, in place now. The spin - 'A new tactical weapon for civilian law enforcement developed by the military.'

Bounding Non-Lethal Munition (BNLM): A confusion weapon based on a tactical area denial munition for site security and perimeter defense. Produces an audible alert signal to friendly forces within a range of 200 meters. The reality - IEEE term, in place now. Frightens away hostiles and identifies user to friendly forces. The spin - 'Foes run away, friends stay and play.'

Stun Distraction Device (SDD): Any NLW which produces a bright light and a loud noise, enabling the user to disorient or briefly distract a potentially threatening individual or group. The reality and spin are found in many of the next few devices.

40 mm Sponge Grenade: Fired from a rifle like a military rifle grenade, it explodes to produce a barrage of densely packed dried sponges which sting as if a rubber bullet, but with less risk of penetration. The reality - IEEE term, used by Cincinnati Police against protesters (not rioters) in a 'drive by shooting incident' - that is, police drove up, fired multiple shots, and then drove off. No loudspeaker orders to disburse, just gunfire. The spin - 'Let's wipe up this mess, boys...'

Stingball Stun Impact Grenade: A NLW hand-thrown spherical grenade which produces a loud blast and blinding flash while dispersing 100 marble-sized rubber stingballs. Can also release a quantity of CS tear gas. The reality - IEEE term, in place now and delivered to unknown agencies. The spin - 'Let's make 'em deaf, dumb, and blind.'

Smokeless Stun Grenade: A NLW consisting of a grenade which produces a deafening blast and concussion wave, but with little smoke so that user visibility will not be impaired. The reality - in place now and used by almost all agencies including law enforcement SWAT/CERT teams. The spin - 'the bark is the bite.'

Starflash Stun Grenade: A special stun grenade which produces a loud blast, an intense flash of light and produces a shower of white-hot sparkles. The reality - in place now but not deployed in street applications because it is too 'war-like' and because it may cause fires. Both would be bad PR. The spin - 'Unexpected 4th of July.'

Thunder Rod Stun Grenade: NLW insertable through holes in doors (or bullet holes.) It produces a loud blast and an intense flash of light. The reality - IEEE term, in place now and known to be delivered to unknown agencies. The spin - 'Bend over, please.'

Thunderstrip Stun Munition: A NLW which can be slid under a door to produce a blast that will stun individuals inside. The reality - IEEE term, in place now. known to be delivered to unnamed agencies. The spin - 'Behind door number one, we have...'

Bursting Obscurant Smoke Grenade: A confusion weapon consisting of a grenade that quickly produces a smoke cloud that can rise to 2-3 stories. The reality - IEEE term, in place now. The spin in a crowd control dispersal situation - 'Confusion is your friend, when smoke is on the wind.'

Flameless Expulsion Grenade: A rubber ball grenade body that contains pulverized chemical agents (CN or CS). No pyrotechnics are involved - a CO2 cartridge at the center of the grenade disperses the irritant through ports at the sides of the grenades. The reality - IEEE term, in place now. The spin - NFPC at this time.

Illuminator Grenade and Flash Grenade: NLW consisting of a grenade which provides a brief period of continued illumination for dark rooms, or a brief blinding flash of light. The reality - IEEE term, in place now. Note, a night time raid consisting of a Flash Grenade attack followed by armed night-vision equipped assault team is quite effective - the defenders will be completely blind but not the attackers. Likewise, a flash grenade followed by an illuminator will achieve similar results, but the attackers will have clear vision while the defenders are still recovering visually. The spin - NFPC, yet.

M203 Grenade: The Antipersonnel blunt trauma crowd dispersal grenade explodes to hurtle a large number of rubber balls in every direction. The reality - blunt trauma translates as concussion - assuming an eye isn't hit, courtesy of the US Army's Non-Lethal Material Program put on display in London conference on NL weapons in 1997. The spin - NFPC at this time.

Ring Airfoil Grenade (RAG) and variants Soft RAG and Sting RAG: Rifle-launched NLW resembling a small radiator hose which disperses a cloud of CS powder (tear-gas) in the (soft version) or a kinetic-energy device for painful blows on impact (sting version.) It is claimed neither version will cause lethal or hazardous injury, even at point-blank range. Its shape permits high accuracy against individual targets and its velocity is great enough to negate dodging, the range being beyond the missile-throwing ability of rioters. The reality - IEEE term, in place now. The spin - NFPC yet, but the battle slogan might be 'Rag 'em and gag 'em.'

M18 Special Land Mine: A toned-down military land mine designed to disable a car or other vehicle rather than destroy it. The reality - this assumes the gas tank is not ruptured and that no one was standing

nearby, courtesy of the US Army's Non-Lethal Material Program put on display in a London conference on NL weapons in 1997. The spin - NFPC at this time.

M139 Volcano Land Mine: A special mine which launches a net over a wide area to capture groups of people. The reality - also assumes no one is standing nearby, which, of course, is required to trip it, courtesy of the US Army's Non-Lethal Material Program put on display in a London conference on NL weapons in 1997. The spin - NFPC.

Barrel-Launched Adaptive Munition

(BLAM) aka Smart Bullet: - A self-correcting bullet containing a piezoelectric ceramic actuator that tilts the round's nose to correct for wind drift and provide sufficient lift to compensate for gravity's pull. The reality - IEEE term, in place now. Variants include traditional sniper's rounds and armor piercing rounds (a single 'rifle' shot can destroy a tank by targeting the small recess beneath the turret and the main body.) The spin - 'A sniper's dream, a BLAM round can provide a doubling of range and a 15-fold increase in accuracy.'

FANGS: Remotely triggered Frequency Activated Neutralization Generator System to stop automobiles on command - a microchip built into the ignition system of cars. The reality - *Police Magazine*, July 1999 announced that designers of the microchip device hope for legislation to require use in every new car sold in the United States. The spin - 'No more high-speed chases.'

EMP Disrupter: Electromagnetic pulse weapon disrupts electrical systems and disables vehicles and aircraft, computers, and electrical equipment, etc., and causes a extreme discomfort and/or disorients human occupants. The reality - Begich cites a USAF document found at <<http://www.usafa.af.mil/wind/34edg/airman/suhajd-1.htm>>

(removed by USAF after his book hit the streets) which says Los Alamos National Laboratory has developed it. The spin - 'No more deadly high-speed chases.'

Road Patriot: An EMP Disrupter weapon which permanently disables vehicle electronics and ignition systems using an a rocket propelled sled to deliver the device from a pursuing vehicle. The reality - IEEE term, in place now. A real product which no one seems to know where the production is going. The spin - NFPC at this time.

Road Sentry: An EMP weapon which is a Road Patriot without the rocket sled, deployed ahead of the target vehicle as a stationary object which may be disguised as a garbage can lid, road patch, or sewer cover. The reality - IEEE term, in place now. A real product which no one seems to know where the production is going. The spin - NFPC.

Road Star: A NLW which destroys tires - a four-pointed star made of steel normally hidden directly under the tire of a parked vehicle or scattered in numbers in front of a moving vehicle. The reality - in place now, long used as a covert weapon to disable victim vehicles for temporary delay or strategic advantage. The spin - 'The tire ninja.'

Combustion Alteration Technology (CAT): A NLW technology which develops agents that can change the viscosity or combustion characteristics of fuel to degrade engine performance or effect near instantaneous engine failure. The reality - IEEE term, in place now. Modern products can be covertly delivered to contaminate the entire fuel supply of a region. The spin - 'A spoon full of sugar makes the RPM go down.'

Combustion Interferent: A CAT-based

variant which specifically exposes a diesel engine to a concentration (3% or more) of acetylene, causing severe preignition and engine destruction. The reality - IEEE term, in place now. The spin - NFPC.

Anti-Traction Lubricant: A NLW consisting of a lubricant applied to roadways which reduces friction of the surface and adversely affects the traction of vehicles on the treated roads, runways, and tracks. The reality - IEEE term, in place now. The spin - 'By setting road-blocks at a curve in the road and in a manner which deliberately leaves an opening for those electing to "run" the barricades, a trap can be set...'

Page 10

Portable Vehicle Immobilization System (PVIS) aka Portable Roadblock: A NLW consisting of a pre-emplaced capture system designed to stop a 7,500 pound vehicle traveling at speeds up to 45 MPH without causing permanent injury to the occupants. One version consists of a carrying case housing a quickly-deployable (by one person) roadblock extending to more than 20 feet; it is equipped with spikes which deflate tires. The reality - IEEE term, in place now with versions employed by various law enforcement agencies. The spin - 'No more high-speed chases.' (With all these toys to end high speed chases, why don't we see anyone stopping high speed chases with them? What are they saving them for?)

Teflon Confetti: A teflon-based environmentally neutral Anti-Traction Lubricant. This product can be used to deny access to areas or cover a unit's flank. The reality - IEEE term, in place now. The spin - 'Party favor for roadblock guests who wish to depart hastily before the real fun begins.'

Plane Wave: An energy wave whose equi-phase surfaces form a family of parallel planes - a wall of energy which cannot be easily escaped by TIs. The reality - IEEE

term, in place now. Many of the following NLWs utilize this tech. The spin - NFPC.

Beam-Plasma Device, aka Free-Electron Laser, aka Gyrotron, aka Virtual Cathode Oscillator: A broadband high-powered microwave generator which employs interaction of relativistic electrons and plasma in directed energy weapons. The reality - IEEE term(s), in place now. Most of the next technologies are derived from this military technology. The spin - NFPC.

EMP 'Phaser': Adjustable (stun or kill) EMP disrupter which at higher levels will superheat internal organs and cause sudden death. The reality - cited by Begich in the same censored USAF web document. Patent #4,959,559 Sept. 25, 1990 Electromagnetic or Other Directed Energy Pulse Launcher, Ziolkowski, Richard W., U.S. Department of Energy. The spin as might be offered off-hand by a user - "Looks a bit like a hamster in a microwave oven to me."

Universal EMR Weapon: NLW based on use of continuous rapid pulses of electromagnetic radiation (radio, magnetic fields, micro-wave, radar, etc.) to achieve offensive/defensive capabilities at a desired level: TIs can be repelled by extremely unpleasant physical reactions (stinging, burning, tingling, loss of hearing, confusion, dizziness, blurred vision, etc.); incapacitated (muscle seizure and convulsions); or killed (cardiac arrest, involuntary motor function arrest, organ failure). Adjustment of wave form, field intensity, pulse widths, repetition frequency, and carrier frequency determine outcome. The reality - all of the above was from a paper by Lt. Col. David Dean, USAF published by the *Air University Press* in 1986 (*Low-Intensity Conflict and Modern Technology*.) In March of 2001, the USMC announced a mobile unit of almost identical capabilities (mentioning only the non-lethal

capabilities in their press release.) The spin from Col. Dean's paper - '...potential uses include dealing with terrorist groups, crowd control...' (Always *crowds*, never riots?)

RF Gunship: A military or police helicopter equipped with RF/EMR weapons instead of miniguns. Weapon can be adjusted between lethal (cook organs) and NL (fry skin) settings. The reality - not yet. A classified 1996 Air Force Scientific Advisory Board study suggests such a weapon system is in works. The spin - 'A truly versatile multi-jurisdiction, multi-role weapon system.'

Dazzle: A NLW technology which temporarily blinds or reduces vision acuity of TIs and electronic visual devices such as video cameras, night vision devices. The reality - IEEE term, in place now. See next few terms for examples and spin.

Laser Dazzler aka Glare Laser: Laser-based gun-mounted dazzle weapon. The reality - in line for DOD funding according to *Jane's Defense Weekly*, March 1996. The spin, we might imagine, if developed by defense contractor General Electric - "We bring good things to light."

Set Beam High Intensity Hand Held Searchlight System: A NLW which generates six million candles of strobe light with an effective range at high strobing level of 100 yards. Variable strobe rate can cause epileptic seizures or disorientation in some TISs. The reality - IEEE term, a manufactured item deployed to unknown agencies. The spin - NFPC at this time. (Note the 'friendly' description as a 'searchlight' when it actually a weapon to blind TIs.)

Flash Blindness: Impairment of vision resulting from an intense flash of light. It includes temporary or permanent loss of visual functions and may be associated with retinal burns. The reality - IEEE term, in place now. Use of the Dazzler technology

and flash and illuminator grenades can cause flash blindness. The spin - NFPC because of the potential for permanent blindness.

Electrical Stun Device: A NLW which stuns TIs with a high voltage, low current, short duration electric shock to incapacitate the target. The reality - in place now. See next few terms for examples and spin.

Stun Guns aka TASER: The most well known form of electrical stun device, which employs either by direct electrode contact or delivered by small harpoon-like barbs fired which trail filament wires leading to the main unit - all hand held. The reality - the voltage on various models range from 10KV to over 50KV and can cause burns and scars, as well as cardiac arrest or severe neurological problems even in a healthy TI. Except for law enforcement, users can face criminal charges just as if they had used a firearm (laws vary from state to state.) New models are pulsing the voltage which allows

even higher voltages at lowered power consumption for greater durations of 'attack time' - and intensifying the 'shock' effect by phasing pulses at frequencies distressing to the body. The spin - 'Compact personal defense with humane stopping power.'

Electrified Air: A wireless stun gun for temporarily immobilizing a TI at a distance with muscular tetanization using modulated current delivered by two channels of electrically conducted air. The reality - Patent #5,675,103 Oct. 7, 1995 Non-lethal Tetanizing Weapon, Herr, Jan Eric. The spin - 'No wires or flesh-penetrating barbs, no burns.' (No tell-tale proof in court.)

Radio Frequency Incapacitating Systems (RFIS) aka Thermal Gun: A NLW which emits electromagnetic spectrum radiation

calculated to cause the sensation of burning or actual burns on the skin, or at higher output levels, to superheat organs to cause severe injury or death. An example is the directional microwave transmitter which heats skin to an unbearable degree as TIs approach the device. The reality - IEEE term. The U.S. marines recently introduced on national TV news a Humvee mounted device precisely so described, though not mentioning lethal capabilities. The spin from news accounts - '...the highly mobile unit will improve crowd control situations.' (Where is *that* in the Marine's mission statement?)

Acoustic Weapon: - A NLW which uses sonic frequencies to cause debilitating dizziness, motion sickness or nausea, and can also generate vibrations of body organs resulting in extreme pain, seizures, or death. See next for reality and spin.

Acoustic Bullet aka **Sonic Bullet** aka **High Powered Acoustic Weapon:** A NLW consisting of a high-power, very low frequency acoustic infrasound (see next) beam weapon that incapacitates by creating plasma in form to the TI, generating an impact wave like that of a blunt object The reality - in place now, IEEE term. Hi-powered versions causes blunt object trauma, and can 'fire' through walls or barriers - if used with various sensing technologies (as described herein) to allow precise aiming when other individuals are nearby. If married with silent sound technology (see below), it can impart audio information which is not only heard by the TI (and only the TI), but felt as it penetrates the body. A number of victims in recent months described precisely these symptoms and circumstances just prior to the technology becoming public knowledge. Similar technology was offered by the Russian government to the F.B.I. for used against the Branch Davidians, but the offer

was declined according to the censored USAF web document which Begich says had specific details on the technology and the event. The spin - 'These people not only want us to believe they heard God speak, but that he thumped them on the head to get their attention.' (Closer to Satan than God.)

Infrasound: NLW involving very low frequency (less than 20 Hertz) sound projection to disorient, sicken or frighten TIs away from designated areas. NOTE: Infrasound frequencies are characterized by long-range propagation and can penetrate ground and structures. Its effects include mild to severe discomfort, organ functional disturbance (nausea, bowel spasms, etc.) The reality - IEEE term, in place now. The spin - NFPC.

Amiability Agent aka **Calmativ Agent** aka **Sleep Agent:** A NLW consisting of an agent which, by virtue of unpleasantness or power to subdue, causes TIs to become drowsy and easily persuadable. The reality - IEEE term, in place now, generally in a form which is absorbed through the skin or lungs into the blood stream. Includes a wide variety of delivery systems (sprays, fired munitions, high-pressure hose, dart guns or blow darts, direct contact) and materials (chemicals, tranquilizers, paints, water-base solutions, super-caustics, gases.) The spin - 'Humane treatment that insures compliance with minimum physical confrontation.'

Delayed-Action Agent: A calmativ agent or other chemical/biological agent which has a controlled or characteristic delay time before becoming effective. The reality - IEEE term, in place now. Typically applied by gas, powder, or liquids, they can often be applied BEFORE law enforcement intends to confront a crowd to allow targeting of larger numbers of persons before they began any strategic defensive repositioning. The spin - 'Ti-i-i-ime, it's on my side - yes it is.'

Super Caustics: Acid agents that can be stored in harmless binary form and used against weapons, tires, roads, roofs, optical systems, or even shoes. NOTE: A super caustic may be considered a NLW if used to deny human contact. The reality - IEEE term, in place now. Can be delivered in any number of ways, weapons, door knobs, and other key items or resources can be coated with caustic materials - but note the TI will NOT know an item is untouchable until actually touching it and getting burned. The spin - 'You can't touch this!'

Anesthetics: A type of amiability Agents used in NLW - tranquilizers, dispensed with gas or darts, that could put people to sleep. The reality - IEEE term, in place now. The spin - 'Render's suspects completely docile or unconscious with minimum risk to either suspect or law enforcement personnel.'

Subliminals: A MC technology based on the unaware and unstoppable subconscious acceptance of information fed covertly to the TI's brain through brief imperceptible but repetitious information embedded within any audio/video source such as radio, TV, film, music systems, and computer speakers and displays, even delivered over the Internet if desired. The reality - Patent #4,777,529 Oct. 11 1988 Audio Subliminal Programming System, Schultz, Richard, et al. Patent #6,017,302 Oct 31, 1997 Subliminal Acoustic Manipulation of The Nervous System, Loos, Hedricus G. More patents followed. The spin strategy - 'Since it is illegal to use this for any other purpose, you can trust us to use it only for good.'

Remote Physical: Devices allow remote acquisition of continuous EEG emotional state readouts and physiological data from a TI without physical contact (and without their knowledge), to include pupil dilation, pulse rate, blood pressure, respiration rate,

and respiration level. The reality - The ultimate *covert lie detector* can also be used to detect hidden persons. Patent #4,958,653 Sept. 25, 1990 Non-Contact Vital Signs Monitor, Sharpe et al. (Georgia Tech Research Corporation.); Patent #5,507,291 April 16, 1996 Method and Apparatus for Remotely Determining Information as to a Person's Emotional State. This is the birth of the Thought Police. The spin - 'Now law enforcement can predict violent behavior and detect signs of mental illness without waiting for a senseless act to draw attention.'

R-BATS: Remote Biochemical Assay Telemetering System is a bioimplant, skin patch, or wrist band device which detects and reports drug traces in the TI. The reality - technology proposed from NASA research in May 1996 NASA Tech Briefs. The implied spin - 'Get clean, stay clean (or else we will know and come get you.)'

Neuro-Electromagnetic Device: A NLW which uses radio signals specifically modulated to directly affect the TI's brain and nervous system from a distance. The reality - IEEE term, in place now - see next items. The spin - NFPC, because it is important that psychiatrists, law enforcement, and media think victims are crazy.

Remote Emotions: A means of instantly altering mood or emotions in a TI by transmitting EEG brain waves directly into the TI's brain using ELF (extremely low radio frequency.) The reality - Patent #3,951,134

Apparatus for Inducing Desired States of Consciousness, Monroe, Robert (Interstate Industries) able to instantly entrain any desired effect once the TI's full range of emotional states are already mapped out in terms of EEG. The spin - NFPC.

Mass Tranquilizer: Use of ELF generated sound waves with embedded EEG signals to reduce anxiety or anger levels to almost any point up to and including meditative or anesthetized states. The reality - Patent #4,335,710 June 22, 1982 Device for the Induction of Specific Brainwave Patterns, Williamson, John (OmniTronics Research Corp.). More patents like this directly alter the victim's EEG and thus, their mood and emotions. Of course, the same technology could also be used to foment violence and unrest when expedient to political need - such as just before asking for more money for police. The spin - NFPC.

Altered State Generator: An ELF/EEG NLW which causes the TI to experience simulated narcotic or psychotic hallucinations: dramatic swings in emotion and mood, sensory illusions (pain, pleasure, tingling, heat), vestibular feelings (vibrations, free floating), depersonalization (as if detached from body, omnipresence, presence of another consciousness'), uncontrolled mental images (from memory, from subconscious): The Reality - many patents support this capability, good example: #4,227,516 Oct. 14, 1990, Apparatus for Electrophysiological Stimulation, Meland. The spin - NFPC.

Pulse Wave Myotron: A NLW 'black box' about the size of a pack of cigarettes. Contact with this device by a TI will scramble voluntary brain signals causing the TI to fall to the ground in intense pain, unable to move, yet vital functions such as heartbeat and breathing remain unaffected. Recovery takes several minutes. The reality - IEEE term, in place

now. The spin - NFPC.

Satellite Mind Link: Use of satellites to entrain humans by broad-area broadcast of EEG via ELF frequencies directly received by the brain. The reality - Patent #3,866,231 Feb. 11, 1975 Satellite Transmission of ULF Electromagnetic Waves, Kelly, Francis J. (U.S.N.) if combined with previous EEG technologies can be used to geographically target select cities or entire continents. The spin - 'ULF signals are used to transmit orders to submerged submarines.' (True.)

Operation PIQUE: CIA 'communications' project launched in 1978, immediately after CIA MC experiments were declared to be 'unworkable' in CIA testimony before the Church Committee in 1977. The reality - cited again by Begich using the same censored USAF web document, PIQUE was used to 'bounce high powered RF (radio signals) off the ionosphere to effect the mental functions of people in selected areas', the selected areas to include Soviet nuclear installations. Since only ELF is the only RF which is known to do this, this project sounds a LOT like the precursor to HAARP. The spin - NFPC. (Could this targeting of nuclear facilities have had anything to do with Chernoble? One shudders to think it.)

HAARP as ELF Weapon: The USAF project earlier described in Weather War. The reality - the ELF capability of HAARP by technical description precisely matches that of MC weapons used to alter EEG as seen in PIQUE. With full northern hemispheric coverage, who would the target be for HAARP - the Chinese, Americans, or both? Patent #5,053,783 Oct. 1, 1991 High Power Low Frequency Communications by Ionospheric Modification, Papadopolous, Dennis (USAF) The spin - 'for research only.'

SuperDARN: A network of HAARP-like facilities planed for North America. The

April 20, 1976 Apparatus and Method for Remotely Monitoring and Altering Brainwaves, Malech, Robert G., was the earliest device capable of altering mood - it was called the biofeedback machine. Patent #5,356,368 Oct. 18, 1994 Method and

reality - confirmed by National Science Foundation Award contract #9704717. Such an array in Canada and Alaska could selectively transmit unique mission specific ELF-EEG MC messages to individual nations. If its purpose is sinister, look for similar 'research' projects in Africa, South America, and Australia, or even Antarctica - to handle the rest of the World. The spin - 'Open to international scientists for any appropriate research purposes.'

The Arizona Hum aka (**Taos Hum**) and earlier (**Oregon Hum**): An ELF hum which can be heard over hundreds of square miles in Arizona for which the source cannot be found. The reality - believed to be an ongoing series of region-wide ELF/EEG MC experiments. The spin from government investigators - 'I don't hear anything. My instruments don't detect anything. What are you talking about.'

Mind Meld: ELF/EEG technologies previously mentioned used to achieve with the human mind what a laser beam does with a holographic plate - capture a complete image of all content, which by digitization and output to a second individual in reverse manner allows the second individual to gain the memories and knowledge of the first - a kind of instant "been there, done that" familiarity. The reality - projected reality for the year 2020 by USAF Scientific Advisory Board, 1996. Accurate transfer of "mental, emotional, and physical states of consciousness" exists today: Patent #5,213,562 May 25, 1993 Method of Inducing Mental, Emotional and Physical States of Consciousness, Including Specific Mental Activity in Human Beings, Monroe, Robert (Interstate Industries, Inc.) The spin for tomorrow - 'Visit *Total Recall* and enjoy the vacation of a lifetime - as someone else!'

Computer Mind Link: Microcomputer

substrates with artificially grown brain cells provide the basis for bio-implants with a number of functions, including linking the mind directly to computers for two-way control and data access. The reality - the first experimental growth of brain cells and bonding of human tissue to substrates has been successful according to the *Wall Street Journal*, Feb 1, 1994. The spin - 'Now you can loose that mouse and keyboard forever.'
Shared Vision: Use of advanced EEG and associated technology to capture the actual in-head view as seen by the TI in real time. The reality - in development according to *Wired News* Oct. 7, 1999, which reported that scientists had successfully created a video of what a test subject (cat) was actually seeing. At this time, the technology is highly invasive, requiring numerous electrodes to be placed directly into the brain. The spin - likely NFPC, but if it were... 'Virtual reality was never like this.'

RAATS: Radio-wave Auditory, Assaultive, Transmitting-implantS, a kind of V2S based on a bio-implant. The reality - In place and ready for deployment. NSA/DOD funded (part of \$2B annually spent in various similar projects at select universities), this MC tech has been developed and tested on nonconsenting persons by Professor K. Kelly at the University of Albany, where one student held 37 others at gun point, shot one, and eventually hanged himself - all after complaining about voices in his head. The spin (from a conference paper offered by Professor Kelly at the Eastern Psychological Ass.) - microchip implants as a notion is '....one of the indicators of schizophrenia.'

Note: In other words, the very pioneer in this MC tech was lecturing fellow professionals that the *tech does not exist* and that anyone experiencing the symptoms was *mentally ill*. According to Kelly's own notes, this kind of

technology is routinely tested on "uninformed, unconsenting subjects" who were usually "federal prisoners and *political dissidents*." What does this tell us about the intended use of this MC tech by the military-intelligence

agencies? Keep in mind they could not possibly have tested this tech on political dissidents without highly illegal covert application. Why should we presume that if they will test it on some of us without our consent, they won't freely apply it on us all once perfected?

Voice Patch: A device which, when placed in contact with a human anywhere on the body (with or without their knowledge) provides direct V2S capability. The reality - Though actually submitted in 1950 and 1968, Patent #3,393,279 Nervous System Excitation Device, and #3,647,970 Method and System for Simplifying Speech Waveforms, these patents were suppressed by the U.S. Patent office and military until 1968 and 1972, both invented by Gillis Patrick Flanagan. Patent #3,566,347 Feb. 23, 1971 Psycho-acoustic Projector, Flanders, Andrew E. (General Dynamics Corp.) took it a step further by providing the wearer with clear audio but those anywhere in the vicinity without the device suffered psychotic disorientation and hearing impairment. The spin - 'New hearing aid technology can be hidden completely to give you the same freedom you used to have.' (And insure you hear the right message.)

Difference Acoustic Wave Generation System (DAWGS): A NLW consisting of electro-pneumatic acoustic generators which produce a high power acoustic beam with precise frequency control. The reality - IEEE term, in place now. This is the basis of a

whole category and range of MC technology described next. The spin - NFPC.

Omnipresent Sound: A wireless means to transmit audible sound through any medium (gas, liquid, solid) without radio waves by means of modulated ultrasonic pressure waves (air movement.) Point of origin and signal are undetectable by TI or others. The reality - Patent #5,539,705 July 23, 1996 Ultrasonic Speech Translator and Communications System, Ackerman, M. Alfred (Marietta Energy Systems.) Does require hardware at both ends, but is easy to conceal or disguise. The spin - NFPC.

Hypersonic Sound: Laser-based device which emulates Omnipresent Sound but has limitation of requiring direct line of site. Does not require hardware at listening end. The reality - this technology was announced by American Technology Corporation's Chairman's, May 17, 1999. The spin from them - 'New capabilities as replacement for home entertainment speaker systems.'

Silent Sound Spread Spectrum (SSSS) aka S-quad or Squad: A means of imparting either or both EEG brain wave patterns and/or audio messages subliminally to a TI, using signals embedded into existing audio source, typically radio or television broadcasts. The reality - In place now. Specific verbal commands (surrender, vote for Our Guy) are imparted into the subconscious where they surface to the conscious as personal thought. By sending EEG signals, emotional states can be simultaneously and instantly entrained (i.e. fear, happiness, etc.) Combined, the result is virtually irresistible. The spin - NFPC

Command Solo: USAF operates several specially modified EC-130 aircraft code-named Command Solo, equipped with the ability to broadcast radio and TV signals of any type or frequency embedded with SSSS

and EEG emotional state entrainments. The reality - Command Solo was deployed successfully in the Gulf war to 'encourage' mass surrenders by Iraqi troops, and again in Bosnia to sway 'elections intended to end the violence.' The spin - 'The U.S. military is prohibited to use this technology on American citizens.' (Every major US city now has frequent C-130 overflights.)

Voice to Skull (V2S): aka Artificial Telepathy, Microwave Hearing: A neuro-electromagnetic device which provides a means of transmitting specially prepared electronic signals to the TI, received as a series of clicks and buzzes which are decoded by the mind as intelligible speech and sound heard ONLY by the TI. The reality - In place now with a broad variety of signal and delivery methods. Typically, voice or audio is broadcast by pulse-modulated signals in one or two low-output radio or microwave transmissions which are precisely aimed at the TI, who experiences 'in head' sound, often described as 'the voice of God, which cannot be disobeyed.' Numerous patents: #4,877,027 Oct. 31, 1989 Hearing System, Brunkan, Wayne L.; #4,858,612, Aug. 22, 1989 Hearing Device, Stocklin, William; #5,159,703, Oct. 27, 1992 Silent Subliminal Presentation System, Lowry, Oliver; and more. See next. The spin -

'Schizophrenia does sometimes involve the excuse of hearing voices, typically claiming "God" commanded the their terrible deeds.'

Electrophonic Effect or Frey Effect: A buzzing or clicking sound in the back of the head experienced by a TI subjected to pulsed microwave radiation, such as from a V2S device. The absorbed energy produces thermoelastic expansion of brain tissues causing an acoustic pressure wave detected by the Corti, a spiral structure within the ear's cochlea containing hair cells sensitive

to vibrations. Discovered by Dr. Allen Frey in the mid 1980's. The reality - IEEE term, in place now. Almost every government agency and military branch has conducted research in this area! The spin at NASA - 'developed to scare birds off of runways.'

Levitation Projector: A device which projects combined VLF radio, magnetic, and electrical charge plane-wave force fields together with sonic bullets in a manner suitable to cause select sympathetic objects to levitate and/or fly through the air. The reality - hypothetical speculation. Or is it? TIs whom I respect for real and practical reasons simultaneously and spontaneously reported similar 'minor' levitations before any public concept of the technology was possible. Scientists at Intersonics, Inc. of Northbrook, Ill., reported successfully levitating a one-ounce steel ball bearing using nothing but sound waves (believed to be a rapid-fire series of sonic bullets). The spin - 'So in addition to being a 'wavie', you're also beset by poltergeists?'

See-Through-Clothes Video: Video digital image processing combined with traditional visible and near-visible spectrum video to produce a startlingly real see-through effect. Variations tested as alternative for tighter airport security. The reality - in place now, accidentally delivered into hands of thousands of consumers in Sony video cameras last year. The spin - 'Very low-light level capability.' (Custom's Office reports that a survey revealed most passengers would rather undergo a strip search or traditional x-ray if suspected than be 'peeped at' en mass.)

Bullet-Hole Camera: A very small cylindrical and self-contained video probe which can be inserted into a bullet hole or otherwise hidden to broadcast images (with or without sound.) The reality - provided by the British government to FBI/DEA and used at

WACO. There is no excuse for WACO based on any lack of knowing what the occupants were doing or planning. The spin - NFPC.

Under-The-Door Camera: A bullet-hole camera on the end of a flex-cable with integral manipulator device which is slipped under the crack in a doorway or other opening and manipulated from the far side to look in any direction. The reality - in use now by many agencies and SWAT/CERT teams. The spin - 'Snake eyes.'

Algorithmic Surveillance Systems & Face Prints: CCTV (closed circuit television) security systems connected to computerized face-print database libraries to watch public places for specified individuals. Computer algorithms compare video still frames against database images on the fly. The

reality - in place now and operational at numerous Federal and State agencies, (and gaming casinos in Las Vegas looking for known cheaters) limited only by the relatively small current library of collected facial images (which may explain why the FBI wants to link and coordinate all US State's driver's license programs.) The spin according to Red Chinese who used video of protesters to identify and capture students involved, - the cameras are a 'traffic control monitoring system.'

Fingerprint Identification Unit (FIU) - A device which enrolls, compares, and verifies fingerprints of a fingers placed at its sensor. The FIU contains a biometric sensor that can reject phony fingers, duplicate fingerprint images, or other ersatz digits. The system can be used for security applications, such as access control to files and machinery. The reality - IEEE term, in place now. Add communications capability, and this could

be used at cash registers to identify purchasers or at entrance/egress. The spin - NFPC. **Automatic Number Plate Scanners (NPS):** Face Print technology applied to comparing video images of automobiles to match select license plates. The reality - in place in all exit points of London, British seaports, and the tunnel to France. The spin - 'Gives us a 5 second response time for giving chase to suspected felons caught on camera.'

Automatic Vehicle Locator: GPS (global-positioning-satellite) based device which transmits the location of an equipped vehicle. The reality - in place now. Built into some cars as an anti-theft and/or navigational device, small portable units can be covertly placed on any vehicle for tracking TI travels. The spin - 'Accurate to within 50 feet, you will never be lost again.' (At least we will know where you are.)

Page 14 Paint Tag Identification: A method for distinguishing between friendly and enemy platforms. The concept puts undetectable microscopic transponders into specialized, conductive paints. A low power signal emitted from the friendly source activates the transponder for discerning ID, or on the targeted enemy item - for destruction by a homing weapon. The reality - IEEE term, in place now. In application against citizens, paint swabs on the TI vehicles or homes can help identify them in quickly with a simple scan. The spin - NFPC at this time.

Individual Position Locator Device or (I

PLD): Individual Position Locator Device is a wrist or ankle bracelet but can also be a bio-implant which uses GPS to track the location of the wearer (see Digital Angel.) The reality - in place now, promoted first by the Army War College in 1989 (see next few items.) The spin - 'We need to know where

our criminals are at all times.'

ELECTRONIC TAGGING

: An IPLD system consisting of a light-weight wrist strap data tag, both waterproof and protected against electrostatic discharge, containing miniature non-volatile memory modules secured to a TI (say, a prisoner). Data describing the person is then loaded into the wrist-strap data tag where it remains until no longer needed (e.g., the prisoner's sentence ends). The other part of this system uses a PC-based handheld reader for reading and writing of the data tag. The data tags can hold up to 100 times more data than the average bar code. The spin - 'Electronic tagging is useful for hospital patients, inventory control, and security marking of property.'

Identify Friend Foe Neutral (IFFN): An IPLD device which in addition to revealing location, indicates if the subject is friend, foe, or neutral. The status can be remotely altered as needed. The reality - from the same 1989 War College source, only makes sense if it is intended that EVERYONE wear such a tag - akin to the mark of the beast (666.) So a TI they want to label as 'armed and dangerous', simply gets their tag zapped and the government hones in with weapons drawn. The spin of the future - 'If you don't do the crime, you won't bear the sign.'

3D-ID Local Positioning System: An IPLD capable of determining the 3-D location of items and TIs within a 3-dimensionally boundaried space (such as a high-rise building.) The system consists of IPLD "tags" associated with people or assets to be tracked, and an infrastructure (satellites and monitoring computers) for tracking the location of each tag. The reality - in place now - IEEE nomenclature. The spin - "Now law enforcement can not only trace a suspect to a high-rise building, but ask the important

question; 'Floor, please?'"

Global Surveillance, Reconnaissance, and Targeting System (GSRT): A space-based all-sensor collection, processing, and dissemination system which provides a real-time information database used to create a virtual reality (VR) image of the area of interest, thus providing all levels of command with full situational awareness (SA), technical and intelligence information, and command & control functions. The reality - IEEE term, in place and being established now. If you thought the special effects spy satellite capabilities in the movie, *Enemy of The State*, were overdone, this is more advanced than that. Think 3-D. The spin - NFPC.

National Identity Card: A proposal to have a single I.D. card used for all identification purposes from drivers license to medical insurance, complete with embedded micro-chip memory to keep track all important personal information. Federal law dictates that the Social Security number is not to be used for identification purposes. The reality - the social security number is THE preferred and most critical form of identification used in credit reporting and ALL contact with medical and other government agencies, and elsewhere. Despite obvious threats to loss of identity by theft of SS#, Virginia and other states have started using SS# as THE driver's license number. The spin - 'More convenient to everyone.' (Especially if also an ILPD device!)

Bioradar: A radar device which helps in searches for buried persons. It can measure heart frequency and breathing up to 3 meters under snow and rubble. It can also detect TIs in buildings from the outside, even through cement up to 6 meters thick. The reality - IEEE term, in place now. See next few terms for details and spin.

Millimeter-Wave Camera: - A camera

capable of measuring the time delay and intensity of millimeter-wave energy that radiates naturally from living beings and inanimate objects. NOTE: Millimeter-wave cameras can be used for "remote frisking" to detect weapons or drugs carried by persons. This is because at millimeter wavelengths, people are good emitters, while metals are very poor emitters. Dielectric objects, such as plastics, ceramics and powdered drugs are somewhere in-between. Clothing and building materials such as wallboard, on the other hand, are virtually transparent. The reality - IEEE term, in place now (see next definitions.) The spin - NFPC at this time.

See-Thru-The-Wall Flashlight: Hand-held see-through-the-wall bioradar technology (millimeter-wave) imaging tool (looks like a large flashlight) not much unlike infrared FLIR devices. Tied to respiration signatures, it can identify and track a specific TI from among many individuals. The reality - in place now according to press release from Dr. Eugene F. Grenaker at the University of Georgia, which itself points out the DOD had *working prototypes since the mid 1980's*. The spin from their material -

'Useful to police officers in tactical matters.'

Life Assessment Detector System (LADS): More powerful version of the hand-held bioradar flashlight used to detect, isolate, and identify TI heartbeats and respiration characteristics at distance and behind walls. The reality - Also developed by Dr. Grenaker

at Georgia Tech, this is an actual product promoted briefly at VSE Corp. Web site (until I asked them questions about deduced capabilities to output video images). The spin, paraphrasing VSE '...able to detect

respiration and heart rates up to 135 feet away... to locate injured persons trapped in collapsed buildings or identify and separate gunmen from hostages through the wall.'

Field Effect Detector: A handheld device used to find human beings hiding behind barriers such as concrete walls and dense foliage, even at hundreds of feet distant. The unit employs a passive detection system not vulnerable to types of countermeasures that might spoof infrared or thermal imagers. The device detects the electrostatic field given off by a human being and, like a divining rod, pulls the device in the user's hand and points toward the TI with an audio or video indicator. The reality - IEEE term, in place now. The spin - NFPC yet, being held back.

Night Vision: A device which allows the user to see in the dark (goggles, hand-held, gun sights, etc.) Based on passive (sense only) or active (illuminate and sense) infrared (IR) technology. The reality - around for years, now available commercially to anyone with the price. I've enjoyed testing a number of Soviet-made units costing a few hundred dollars. The spin - 'Turning night into day.'

Thermoviewer: A hand-held night vision device the size of a pair of binoculars, that can "see" in absolute darkness. It creates images by sensing minute temperature differences between the object sought and background, and was designed to find enemy troops and vehicles at night.

Garret Scanner: An electronic device used to scan rooms for concealed weapons. Includes a "reduced sensitivity" mode for scanning near floors containing reinforcement bars (rebars) or pipe. The reality - IEEE term, in place now. The spin - NFPC, presumably held back for final gun seizure efforts.

Forward Looking Infrared (FLIR):

Typically Helicopter mounted technology provides 'nighttime' imaging capability, day-or-nite thermal imaging capability useful to penetrate ground and walls for hidden objects or persons. The reality - in place now. Various versions of the technology have specific strengths or weaknesses. The spin - 'All the better to see you with.'

Coherent All-Radio Band Sensor

(**CARABAS**) aka **Profiler**: An airborne synthetic aperture radar (SAR) technology in the VHF band (30 - 300 MHz) that possesses good ground-penetrating capability (10-12 feet) also able to detect objects tunnels, pipes, cables, etc., see through foliage and camouflage. The reality - IEEE term, in place now. Alternative to FLIR, it is not blinded by thermal hot spots or light sources, works equally well in daytime. The spin - NFPC.

Cell phone (as)Scanner: An undocumented feature found in many off-the-shelf cell phones which allows them to be converted into an automatic scanner which scan-detects and decodes scrambled cellular conversations by simply pressing a series of keystrokes. The reality - demonstrated to this author by a phone salesman who says he regularly shows customers how to do it. Learned the codes from the Internet, he said. The spin as subsequently told me by a phone maker representative - 'Strictly a diagnostics tool.'

All (almost) Band Radio: Some 'all-band' radios manufactured by companies who are also defense contractors commonly omit certain frequencies known to be used by political dissidents. Grundig, for instance, blocks nearly one-half dozen such stations in Europe. There have been no 'tests' to see if products sold in the US are so afflicted, but most users would simply assume poor reception, not hanky panky. The spin - NFPC.

Public Safety Answering Points (PSAP): A system of identifying the location and user

of a cell phone when 911 is dialed. The reality - required by FCC rules in 1996 for completion by Oct. 1, 2001. This technology can easily be subverted to track cell phones and pagers anywhere, anytime (not waiting for dialing of 911), by simply specifying the target phone. This is not a new capability, but it is an automated version of what used to be a fairly difficult task requiring special gear and coordinated efforts. The spin - 'Improved public safety.' (Really? I wonder what percentage of cellular phone 911 calls are made by people who can't simply *say* where they are?)

Roving Wiretaps: A wiretap method which randomly selects individual communication signals within a larger specified communications channel such as a telephone trunk line (tens of thousands of calls). The reality - NSA technology allows for and is regularly does this in operation ECHELON (described herein) despite Congressional warnings it is *not* legal. Now, FBI and even local law enforcement can request access to this technology through liberally granted court orders based on presumption of guilt by association, even if the association is only that you work with or live near the actual targeted individual. The spin - 'If you don't have anything to hide, you shouldn't care who is listening.'

Carnivore: An FBI e-mail wiretapping system consisting of a Packet Sniffer used to locate records (and only those records, they are quick to claim) in e-mail messages and Internet based telephony for which the FBI has (we hope) received a court order. The reality - in place now. The name is explained as "Carnivore chews all the data on the network, but it actually eats *ONLY* the information authorized by a court order." The spin - 'Don't worry, the FBI never exceeds its authority, plants evidence, entraps

suspects, or wiretaps without a warrant, etc.'

E-MAIL Bomb aka **Information Bomb** and **Denial of Service Attack**: An automated script which generates a chain of e-mail messages or Web site page hits intended to overload the resources of the victim server processor, or Mail Transfer Agent (MTA) to target the server, firm, or a select server client (TL.) Can entail sending massive files or FTP commands. E-mail bombs include chain bombs, error-message bombs, covert distribution, and mail exploder exploitation, among other techniques. The reality - in place now. My own Web site was hit with some 9,000 rapid-fire requests for the same Web page while I was on the air with Jeff Rense, ostensibly to prevent listeners from reaching my Web site during its promotion on the show. The spin, as claimed by an ISP unwilling to see bogeymen - 'Sometimes routers get confused and send out multiple requests through multiple paths, and tend to confuse other routers.' (This is denied by router manufacturers.)

Codeaphone: Not to be confused with the commercial telephone answering machine or company which makes it - use of remotely delivered high-speed digital command data packets over the telephone to cause any combination of results: Block or redirect outbound or inbound calls, simulate busy or endless ring, turn telephone into room bug even if still on hook, manipulate billing and caller ID information, and more. The reality - as presented first in this author's book, *The Professional Paranoid* in 1998, is based on NSA technology built into the modern digital telephone system when NSA worked hand in hand with Bell Labs to define the 'telephone system of the future' which is, by coincidence, quite Echelon friendly. This author has experienced first hand some remarkable telephone manipulations using

this technology involving to-the-minute synchronized interference with voice, fax, and email of hundreds of clients, and suppression of recording equipment with a high-gain silent sound signals. The spin - NFPC at this time. (But it is in my book, *The Professional Paranoid.*)

Communications Deception: Use of devices, operations, and techniques with to confuse or mislead the user of a communications link or a navigation system by radiation, re-radiation, or reflection of electromagnetic energy. The reality - IEEE term, in place now. See next two terms. The spin - NFPC.

Meaconing: A communication deception technique which targets navigational instruments and navcom devices. The reality - IEEE term, in place now. The military can disable modern air and sea transportation navigational capabilities. Under command of FEMA, this technology could be used to prevent Americans from safely using aircraft and boats. The spin - NFPC.

Selective (GPS) Availability (SA) and Differential GPS (DGPS): A type of meaconing which prevents an enemy from reliably using the Global Positioning System (GPS.) The ground-control station can deliberately introduce satellite timing and position errors into satellite transmissions to reduce the accuracy of civilian and unauthorized users. The reality - IEEE term, gives military and FEMA capability to selectively provide unhampered use by friendly forces through Differential GPS (DGPS), a technique requiring communications between two receivers, one of which is at a known location. This system can be used against citizens in a martial law or military take over situation to render their GPS tools quite

inaccurate. The spin - NFPC.

Project ECHELON: NSA's highly successful attempt at world-wide electronic communications surveillance based on continuous computerized sample-monitoring of all land-line, cellular, radio, and fax or email communications. The reality - in place in the United States and the U.K. for many years (visit the ACLU Web site for latest info.)

Responsible for the Princess Di 'lover' tapes. The spin - NFPC, especially since Congress is currently investigating NSA and Echelon for possible violation of law.

The National Reconnaissance Office (NRO): Established under President Bush to allow facilitate NSA and CIA operational command of America's spy satellite network. The reality - this project was not deemed necessary at the height of the cold war when spy satellites were extremely important, but were manageable by CIA with a handful of staff. The NRO staff is many thousands and has it's own Pentagon-sized building. The spin - 'Satellites R Us.' (Perhaps, if you add in Echelon spying on Americans.)

Sewer and Water Pipe and Pipe Crawlers: The sewer and water pipes running from a building to and including the network of pipes in the street. A pipe crawler is a small remotely guided electrically driven device which often used to inspect sewer pipe, typically equipped with mechanical cleaning tools and, often, with lights and cameras. Cables run from a large reel at the point of entry to the crawler to supply command and power. The reality - documented by a TI who saw a 'work crew' deliver a crawler to a neighbor, smelled sewer fumes in his home and heard something in the pipes, saw the control cable through an inspection plug in home and trapped the device by blocking the passage at that point - forcing eventual covert entry by his opponents to free the

machine. Sewer pipes offer a network of gateways into a TI's home by use of 'pipe crawler' especially outfitted with any number of available MC devices, making it almost impossible to locate the true source of an attack. In like manner, by inserting a special underwater microphone into a water supply line, water pipes can be used to turn any sink or toilet within a targeted building into a listening device, since water carries sound in a useful manner. The spin - NFPC.

Electrical Wiring, Light Bulbs, & RF Modulation: The wires within a building and which run from the building to the main power supply external of the building. Common screw in incandescent light bulbs used to light a room. RF Modulation is a means of impressing a signal of some other purpose, such as communication or MC signals, onto the AC power line at any given point, then demodulating the signal at one or more given points elsewhere on the system. The reality - another means of introducing electronic attack technologies into a TI's home, as in the above Sewer Pipe example. By similar manipulations, light bulbs can be made to flicker imperceptibly (or perceptibly) as part of an electronic attack, cause vision discomfort, or impact on moods or emotions and general well being. The spin - NFPC.

The Telephone System and Telephone Answering Devices (TAD): The network of telephone cables external of and connecting to a home, plus the wiring within the home, and any form of telephone answering device including a hand set, answering machine, computer modem, fax machine, etc. The reality - because there are excess wires not used by telephone equipment, telephone systems can be applied to delivery of electronic attack technologies as described for plumbing and electrical wiring, with the additional capability of providing electronic

listening surveillance or sensing of victim presence and state of mind. Telephones themselves, even when not in use, are often used as listening devices. The spin - NFPC.

Cable TV and Televisions, Home Entertainment Systems: Cable TV cables from the network of cables in the street into the building, the wiring within the building and those connecting to TVs, VCRs, and Home Entertainment Systems to provide television and audio programming, plus those very entertainment devices. The reality - another means of introducing electronic attack signals into a TI's building, and further, with minor modification of a television, the ability to turn the speaker system into a listening device or add a video camera to provide visual surveillance. The spin - NFPC, though in England there have been several instances of unusually worded TV programming advertisements which implied that *viewers are being watched by their TV*.

Window Panes: Window Panes and picture windows, skylights, etc. The reality - glass panes may serve both as a speaker and/or microphone by vibrating sympathetically when struck by sound or pressure waves. There are several ways to take advantage of this concept to introduce audio elements of electronic attacks for MC application into the targeted building on a selected room basis, or to provide remote audio surveillance of a given room, typically by use of a laser beam or direct pickup. The spin - NFPC.

Web Access and Audio Content: Internet connectivity using a home computer, when including speakers and specifically visiting Web sites which provide audio signals, provides a means for MC attack using subliminals, typically placed deliberately on the Web site. The reality - in place now, but unless high-quality sound is used, the effect is questionable, IMO. Further, it is not

likely that a given TI would voluntarily visit a Web site set up in such a manner. However, it is possible that by intercepting Web transactions at a point between the Web site and the TI, audio could be impressed with subliminals 'on the fly', making any and all audio content a potential MC tool. Spin - NFPC. (Napster-like resources would be an ideal Web medium, especially if a TI records subliminally contaminated tracks onto a CD for use in the car or elsewhere.)

Electromagnetic Pulse Weapon aka EMP Bomb: Any device which can produce an electromagnetic field of such intensity (see HERF, next) that operating electronic gear of any kind experiences failure and magnetic media experiences total data corruption. The reality - in place now. A suitcase sized unit can completely kill all operating electronic equipment, including any running motors and automobiles or similar, within the radius of several blocks. Homemade devices can be constructed with a lesser kill radius. Persons

within attack range suffer severe disorientation and unpleasant side effects, including severe discomfort, internal bleeding, or even death. The spin - NFPC.

High Energy Radio Frequency (HERF): The destructive output of an EMP bomb. The reality - IEEE term, in place now. The spin - NFPC at this time.

Biometrics: The automatic detecting, measuring, cataloging, and analyzing of human characteristics for identification purposes based on a person's physiological or behavioral characteristics. The reality - IEEE term, a new word for technology as old or older than fingerprints. See next two terms for details. The spin - NFPC.

Physiological Biometrics: Biometrics that rely upon unique physical characteristics, such as Face Geometry; Finger Scan; Hand Geometry; Iris Scan; Keystroke Dynamics; Speaker Verification; Retina Scan

Behavioral Biometrics: Biometrics based on mechanical human characteristics, such as voiceprints, handwritten signatures and key stroke/signature dynamics.

Q-Methodology or Psychological Profile: A sophisticated analytical tool created by CIA research for use in MC and other applications. A given TI is evaluated psychologically to formulate predictable behavioral responses to given circumstances. The reality - in place since the 1950's and enhanced over time, the tech is used to determine a TI's susceptibility to blackmail, death threats, or other tactics which can then be executed in high confidence. The spin - NFPC.

Parallelistic Logistical Analyses of Nation States (PLANS): Modeling technique predicts political shifts in target nation states: government forms, leadership, political party power - and resulting impact on strategic alliances, military affairs, economics, sociology, and foreign policy. Allows contingency plans, adjustment of trade, investment, and foreign policy, and other steps to take advantage of or interfere with predicted changes. The reality - as part of establishing an insurance policy (extremely successful) I wrote this patent application for a TI who holds a Phd in Political Science. In its first full-scale test the method accurately predicted multiple changes in power and other key political events in Iran more than four years ahead of their actual occurrence - naming specific persons involved. (FOR SALE: Corporate buyers and others, contact me.)

SpeakerID: A Behavioral Biometrics product available to local law enforcement and others which can, with even a few

syllables of sample speech, be programmed to recognize specific individual identities by telephone or recorded samples, even if they have a cold. The reality - NSA project echelon has obtained a massive database of sound samples from American citizens, perhaps numbering in the millions, making it possible to identify and track people within seconds of using a phone. The spin - 'We can place light offenders on house arrest and with an automated series of phone calls to their places of work or homes quickly determine if they are where they are supposed to be, or in violation of their sentencing.' (Yeah. But what else will you do with it?)

Mimicaka Voice Synthesis Device: A digital audio-processing process which translates the voice of one person into the voice of a different specified person based on sound samples of the specified person, the result of which is virtually indistinguishable from the real person even with wave-form analysis. The reality - in place now: Patent #5,425,130 June 13, 1995 Method and Apparatus for Transforming Voice Using Neural Networks, Morgan, David P. (Lockheed Sanders, Inc.) The spin born of misuse - 'Analysis of the 911 call from the murder scene clearly destroys the accused's alibi and places him at the crime.'

Clipper-Chipper: On-the-fly decoding of encrypted data via technology built into every digital modem, fax machine, and telephone allows government to access telecommunications data on demand. The reality - as also presented first in this author's book as based on NSA technology which redirects a copy of the call in unencoded form to any specified location. The spin - 'A warrant is required to access both halves of the decryption key, one half in the hands of DOJ and the other in the hands of the telephone company.' (But NSA,

who also operates ECHELON, invented and thus possesses both halves. I wonder...)

The Intel Pentium III: A popular computer microprocessor with a built in serial number useful for tracking the identity of a computer user/owner over the Internet and/or in copied software or generated files. The reality - in place now. While Intel assures us computers are shipped with this feature disabled, it can be enabled remotely by any number of covert Web transactions. The spin - 'Intended to deter theft and recover stolen computers.'

Intel Privacy Chip: A microchip which can give Internet users a new level of protection against identity theft, but which also includes a covertly trackable identity feature not unlike the Pentium III. The reality - in place now according to Intel Press Release 1st Qtr. 1999. The spin - 'A new level of personal security for on-line transactions.'

TEMPEST: 1) Transient Electromagnetic Pulse Emanation Standard - which is an NSA program which governs the development, testing, and secure operation of electronics used in highly classified projects - protecting them from surveillance attacks based on... 2) Transient Electromagnetic Pulses Emanation Surveillance Technology - which allows someone in a van or nearby building to zero in upon the electromagnetic radio frequency 'noise' generated by any given specific computer and interpret by signal processing software to 'see' the content of the computer screen exactly as if sitting before it in person. The reality - in place since 1985 (see next) and refined now to include technologies other than computers, such as PDAs, copiers, fax machines, etc. The spin - still NFPC.

Van Eck Device and Van Eck Monitoring: The effect and process behind the capability of TEMPEST technology discovered by Dr. William Van Eck in 1985.

Bugged Bugs: Living insects which have tiny listening devices or cameras with transmitters powered by light installed on their exoskeleton. The reality - a report (apologies, unable to relocate original reference at this time) states this has been achieved by Japanese government scientists. The spin - NFPC at this time.

Smart Dust (an array of) **Microelectromechanical Systems** or **(MEMS):** - A collection of specialized microchip "mote" devices light enough to remain suspended in air (like dust), buoyed by air currents. Each mote contains a solar-powered thick film battery, and may include a GPS receiver and various sensors and is able to communicate with other motes and control stations using laser-based transceivers. Intended to be scattered in large numbers and powered by ambient light, it can transmit information on environment, human activity, and collective optical data useful in surveillance. Collected data can be transmitted in real time by laser scan from miles away. The reality - IEEE term, in R&D according to Nov. *World Net Daily* article. The spin - 'Stay clean or we will be watching you.'

Micro or Miniature Air Vehicle (MAV), Micro UAV (Unmanned Aerial Vehicle): Ultra small remotely operated flying observation platform no larger than six inches in length with bulging hex-covered "eyes." Has six mile range at 40-50 MPH. Military applications allow it to fly to and place itself

on a target and emit a low energy GPS signal or code allowing a homing weapon to guide in on its position. The reality - IEEE terms, prototypes being tested according to the Office of the Assistant Secretary of

Defense. The spin - NFPC at this time.

Micromechanical Flying Insect (MFT) aka **Fly on The Wall**, aka **Robo-Bug**: Even smaller (paper-clip sized) version of MAV. The reality - IEEE term, under development by DARPA contract. The spin in cheek - 'What is that - an insect? No, its just another L.A.P.D. helicopter.'

DARPA-NASA BOT: A small urban tactical mobile robot. The reality - a sign that the DOD expects a war against US citizens, DARPA has contracted NASA and JPL to develop such a toy according to NASA documents. The spin - 'Counter terrorism tool.'

UGV: Unmanned remotely operated Urban Ground Vehicle used in urban combat. The reality - think tank Pablum continues to fuel speculation the Pentagon is gearing up for war on America's main streets, from Robert F. Hahn II article in the U.S. Army War College *Parameters*, Summer 1999. The spin - 'Delivers supplies under fire without risking life.'

Urban Warfighter: The DOD's idea of the soldier of tomorrow. The reality - also from Hahn's *Parameters* article. The future spin - 'The year is 2025, and the constitutionalists and patriots refuse to turn in their guns.'

APC: A military tank-like armored vehicle which transports troops into battle. The reality - National Guard APCs were regularly called into play by Portland Police Dept. despite a judge's ruling that NG units could not participate in police actions under Posse Comitatus without separate approvals for each such use by the Governor under the declaration of Martial Law. The spin - 'Local police were aided by NG vehicles today in a dangerous confrontation with drug dealers.' (As I recall, one marijuana joint was reported 'recovered' some two weeks later - but at the

scene, Police stated no drugs were found.)

A-10A Thunderbolt (Warthog): Military close support attack (tank killer) aircraft equipped with 30 mm rotary cannon and eleven hard points for ordinance. The reality, as part of the unfolding story of Forestgate, CIA's Evergreen Air attempted to secure 100 A-10A, approximately 1/4 of the estimated inventory. The aircraft is built around a huge gun which is integral to the airframe and cannot be removed without destroying the aircraft. Four squadrons of the aircraft were given to the Air National Guard (parked within walking distance of Evergreen's facilities), which begs questions - what would a 'civilian air line' and State Air Guards (charged with air defense mission against foreign bomber attack) need with ground attack aircraft? The spin - 'Intended for fire fighting purposes.'

Inverse Synthetic Aperture Radar (ISAR)

: Special down-looking radar detects motion of ground units from airborne platforms, as used in the gulf war to detect Iraqi missile platform movements, as well as the attempted flight from Kuwait of the Iraqi Army (which was subsequently slaughtered by A-10A and other aircraft.) The reality - several USN S-60 Blackhawks equipped with side-looking radar pods high and near the rotors were observed in maneuvers over and near Oregon highways. Because of technical difficulties of radar vs. rotor blades, these could only have been looking sideways and down, implying ISAR technology. Since ISAR technology has previously been used only by USAF command on much larger AEW platforms, we must ask: is government testing ISAR as a means of simultaneous tracking of thousands of US citizens on American highways? The spin - NFPC.

Seismoacoustic Array: A set of sensitive sound devices used to monitor wave and current dynamics and beach surf conditions. NOTE: Seismoacoustic arrays located as far as 2.2 miles offshore have been found to be capable of detecting and tracking land and vehicle activity. The reality - do you suppose that the government set these things inland to detect waves? What about waves needs detecting? On the other hand, if you want to detect movement of people who shouldn't be moving in time of martial law... The spin - 'Sleep well, we are watching the waves.'

Chameleon Camouflage: Paint or cloth dye which use tiny nanoelectronic sensors and devices to effect color-change. Although intended to minimize eyesight detection, chameleon camouflage could be adapted for application in the near-visual spectrum, masking infrared signatures or other emissions. The reality - IEEE term, in place, but not known to be deployed. The spin - 'Don't fire until you see the whites of our eyes.'

Crowd-Control Suit: Specialized clothing which offers protection to individuals, such as riot police, without presenting an aggressive appearance. The reality - in place now. The spin - 'Look your best for the arrest.' Have I missed anything? Messed up? email me: hms@proparanoid.com

Military-Police State In Action

Many of the following items were obtained from articles clipped from *The Spotlight*, sans dating. A much larger body of such material exists.

FEMA/DOD Emergency Housing: FEMA and DOD have, it is claimed, established 43 'emergency housing' facilities capable of holding 25,000 - 40,000 persons which are perhaps better described as detention centers (separate facilities for men, women and children.) DOD is spending billions to refurbish

bishe “closed and scheduled to be closed” bases to house additional tens of thousands each. The reality - reported in the ‘inflammatory left wing’ video *America in Peril*, this author wonders how far from the truth it could be: Here in Oregon, the National Guard put out a construction bid for ‘emergency housing’ calling for a density of 3 square feet per person and jail-cell sized rooms with tiny, high windows. The spin - ‘We need more emergency housing.’

Shoot Americans Questionnaire: *The Spotlight* newspaper confirmed reports that army and marine units were given a questionnaire asking if they would be willing to swear allegiance to and obey United Nations commanders, serve along side of Police in law enforcement and fire on American Citizens who refused to turn over weapons under a Government order to seize all firearms. The reality - such a survey would provide a means for advance determination of which officers and men could be trusted in the event of such an action, and who would have to be removed from sensitive positions in such an event. An overwhelming majority of respondents replied yes to all questions. The spin - ‘One officer’s private project for his doctorate’ (This cover story was proven impossible by virtue of the fact that the document was officially handed out across geographic, branch, and unit barriers.)

Knock and Talk, Alaska: State Police and National Guard ‘training’ in a neighborhood ‘outreach’. The reality - Kenai Peninsula, south of Anchorage, where Troopers went house to house backed up by armed soldiers in an APC and low flying aircraft buzzing overhead, knocked politely on the door to ask if residents had any contraband. They would then invite themselves in for a warrantless search, and if denied, suggest that

the soldiers had orders to see that there was no trouble. The spin - ‘Insuring a close working relationship with the community.’

**Operation
RANIER LIGHT
, Washington**

State: The Department of Defense had planned to parachute a small mock invasion force of

Army Special Forces from Ft. Lewis into Ranier, Washington, where they would engage for four days in simulated combat with 170 members of the Washington NG, but the event was canceled when local residents got wind and protested.

Transportation Department Spy Planes, Washington State: The King County International Airport (Boeing Field) had four camouflaged OV-10 Bronco aircraft equipped for infrared and laser nighttime surveillance until reported in *The Spotlight*. Exclusively a Marine combat aircraft, these bear civilian registration markings for the State Dept. of Transportation, and were parked along side of four black-painted unmarked Bell UH-1 military helicopters. The spin according to DOT - ‘Search and rescue use.’ (Which begs two questions: Since when does the Hwy. Dept. conduct search and rescue? Shouldn’t the aircraft be painted brightly so they could be seen by those in need of rescue?)

**Operation
TROJAN HORSE
, aka The Liebe**

Street Raid, Oregon: Legitimate cops wore military fatigues with the word “POLICE” sewn into their uniforms underneath which they wore bullet-proof vests, and carried Police MP-5 machine guns. Illegally participating National Guardsmen wore identical fatigues with bullet proof vests *over their*

uniforms and license plates *strapped over those* which read “POLICE” and carried Army-Issued MP-5 machine guns. The raid further involved an NG APC unit, OH58 helicopter (which citizens took as an armed gunship due to the FLIR projections on its nose), at least one Army Intelligence officer, and a known CIA operative. The spin - apparently NFPC - the NG General, the Governor, the Governor’s Press Secretary, the Mayor of Portland, the City Attorney, the Police Chief, and the Police PR Officer all went on vacation simultaneously and their offices were ‘unaware of the raid’ when asked, a neat trick after heavy news coverage the whole week before.

United Nations Hostages, Colorado: Yet another simulated invasion of sorts took place in Green Mountain Falls, Colorado, where 40 Russian speaking soldiers from Fort Carson’s 104th Military Intelligence Battalion detained and interrogated local citizens at large as part of a HUMINT (HUMAN INTelligence gathering) exercise under the spin of - “...a hostile town under the ‘protection’ of United Nations.”

A Restricted Area, Georgia: 300 Marines of the 22nd Marine Expeditionary Unit from Camp Lejeune, N.C., descended from Blackhawk helicopters on Tybee Island near Savannah in the middle of the night. Support Cobra gun ships hovered above houses as soldiers entered yards with drawn weapons and damaged private property as they took up positions in bushes and behind vehicles and buildings - as if the homes were enemy barricades. Residents protesting were given damage claim forms and ordered “out of a restricted area.” It was claimed that warning circulars regarding the mission had been distributed before the exercise was to begin, but no such flyers were recovered or understood to exist by local residents - who would

have been asleep at the time. Marines, with Georgia State Police, conducted warrantless house-to-house searches. The official spin according to a Marine Public Affairs spokesperson - "The operation was designed to provide vital practice in evacuating U.S. citizens who might be held against their will" (In the act, holding citizens against their will.)

Soviet Militia, California: Marines from Camp Pendleton's 13th Expeditionary Unit were involved in a ten-day multiple urban warfare operations in the Sacramento area, July 23rd, 1994. Marine helicopters practiced urban combat navigation techniques - flying low and between office towers, hotels, and apartments while infantry and ground reconnaissance units worked along side of federal, state, and local law enforcement agencies. Simultaneously, near Sacramento, Russian Police and Soviet Militia troops were training with SWAT teams from Las Vegas in jungle camouflage fatigues along with San Francisco Police wearing black, unmarked dress. The spin - "Routine training at several privately owned sites" (Those code words translate to CIA fronts.)

Grecian Firebolt: Annual FEMA response drill applies up to 10,000 men in combined Army, Navy, Air Force and Marine units in a twelve-day exercise involving riot control and emergency communications, typically conducted at the Johnson City MOUT. The reality - FEMA assumes control of the military in only one circumstance, the suspension of the Constitution in a declared state of emergency, the only practical application and purpose of which is control of the civilian population. The spin - 'Operational readiness test.'

U.S. Geological Survey (USGS): A yearly detailed mapping of U.S. terrain. Reality - satellite imaging is the most accurate and useful mapping tool in existence, able to

show not only terrain, surface resources, the condition of those resources, population densities, but even underground resources such as mineral deposits and water tables. Historically, prior USGS surveys have used an average of 500 volunteers each year since 1986 to mangle the entire country, few of which ever actually went out 'looking at terrain.' However, in 1996, the USGS contracted with Earth Science Field Corps., believed a CIA proprietary located near the National Reconnaissance Office and CIA headquarters to provide 2000 'volunteers' (for which no ads requesting volunteers were run) to walk the woods of the Pacific Northwest - and nowhere else. I believe this may have been a cover to locate the unusual number of well armed Vietnam-era survivalists who have dropped off the face of the earth and live 'in country', known to believe the Constitution will be overthrown. The spin - 'Better maps of the region are needed.'

Hurricane Andrew, Florida: FEMA's due response included special U.S. Army Psychological Warfare units who established and provided all communications, food, water, temporary housing, police, and general aid to the area. The operation was intended to see how the public at large responded to being dependent only upon military for all needs.

Operation

VERDICT, USA

: An operational readiness exercise involving law enforcement and national guard in preparation for any possible civilian unrest due to the Rodney King trial verdict. The reality - overflight photomapping of every major U.S. city by CIA operated military reconnaissance aircraft in preparation for total urban combat. The spin - NFPC. (Where did the images go and what was done with them?)

Something Odd About McVeigh

The notion that Tim McVeigh is the Oswald of our time, a throw-away patsy served up for public focus while the true villains smirk in the shadows... haunts a number of civilian skeptics of government's case. From the perspective of someone who is investigating the OK bombing as a conspiracy involving military units (see proparanoid.com) and doing so with an understanding of mind control technology, I am not the first to wonder if McVeigh and Oswald were not victims of CIA mind control.

If true, it would be the same kind of technology applied on Sirhan Sirhan, and perhaps Oswald - tech based on multiple personality disorder (MPD.) The CIA's Monarch program created large numbers of MPD slaves through the application of Ritual Sexual Abuse (RSA- the 'S' can also stand for Satanic.) This project which was at its height in 1970-77, using 5-10 yr old children as victims intended to become future programmable adult operatives.

McVeigh is 33 years old. Do the math.

More important than this coincidental matter is that a programmed MPD Delta type (often used in military operations bearing the same name) has a number of inner 'alter' personalities which are given very specific assignments. One assignment is to play the role of watchdog intent on preventing the outer self from doing or saying anything that might go against the programming. Typically, this manifests as forced disassociation. That is, the outer persona is 'forced' by the alter to suddenly veer attention away from the taboo

to some safer matter.

I have had the opportunity to review roughly two dozen letters from McViegh to various reporters and writers, all of which were intended to answer specific questions about the bombing. The letters are 100% the same in style and content. The first paragraph gets the usual greeting out of the way, and the second gets to the meat. Yet after the very first sentence about Oklahoma (itself not very revealing) disassociation takes grip. The rest of the wordy letters shift to and remain on television and movie programming . No bombing information escapes. Every single time: disassociation.

Interesting thought to ponder: If McVeigh dies and there is a conspiracy, the only first-hand knowledge of the truth available to us dies with him. As a programmable, the death wish is a natural result of alter programming, all serving an unseen master's interests. For these reasons, I for one am glad his execution has been stayed, and further pray that the FBI documents recently exposed to public scrutiny will help us get closer to the truth, and perhaps force a new trial where the full body of evidence is heard, not just evidence manufactured, tampered with, or suppressed. That caustic accusation stems from the simple fact that no quantity of explosives of the type claimed to have been used by McViegh could account for the nature of the damage actually found in the Murrah building. These are not new charges, but they are well documented on the Web and even in the public record. For some reason, no one wants to ask why the scientific evidence does not add up to the new math applied by FBI. I for one, do.

Always Leave Them Laughing

Security has to be tight anywhere national security is involved, even tighter when daily fare, such as at NSA headquarters. And

perhaps even tighter if involved in criminal abuse of power or plots of treason. How much tighter still, if paranoia creeps in because of all the security leaks in the news? I swear I am not making this up. A sign similar to this *was* posted briefly at an unnamed secure facility - but I simplify in paraphrase for clarity and impact - the latter found in the fine print... which would seem to be the most demanding and harsh security method ever devised at a Federal facility.

WARNING!

The new card-scan and voice-print security system will be activated next Monday, August 3rd. Effective as of that date:

Positively

NO ADMITTANCE

Without New Card And Passwords!

New scan cards will be issued in exchange for the current ID badges on Wednesday Aug. 5th in room 210. Employees will then be scheduled over the next few weeks to have their cards encoded with appropriate scan data and to record their voice passwords.

All employees must be using scan cards by Aug. 3rd or their security clearance will be revoked pending review.
